Fuel System

Fuel passes from the fuel tank through a water trap, which incorporates a fuel supply tap and a gauze filtering screen, to the primary pump. The primary pump is mounted on the main injection pump housing. A hand release is provided for venting air from the system.

through slide nozzles injecting directly into the pre-combustion chamber of the engine. See Illus. 1.

Excess fuel from the low pressure system is relieved through a valve (4) on the top of the filter body. The excess fuel flows back to the fuel tank through a line which also serves to return the injector back leakage. See Illus. 2.
