Despite the best efforts of educators, our nation's schools are dangerously obsolete. Instead of teaching students to be critical thinkers and problem solvers, we are asking them to memorize facts for multiple-choice tests. This problem isn't limited to low-income school districts; even our top schools aren't teaching or testing the skills that matter most in the global knowledge economy. Our teens leave school equipped to work only in the kinds of jobs that are fast disappearing from the American economy. Meanwhile, young adults in India and China are competing with our students for the most sought-after careers around the world. Education expert Tony Wagner has conducted scores of interviews with business leaders and observed hundreds of classes in some of the nation's most highly regarded public schools. He discovered a profound disconnect between what potential employers are looking for in young people today: critical thinking skills, creativity, and effective communication, and what our schools are providing: passive learning environments and uninspired lesson plans that focus on test preparation and reward memorization. He explains how every American can work to overhaul our education system, and he shows us examples of dramatically different schools that teach all students new skills. In addition, through interviews with college graduates and people who work with them, Wagner discovers how teachers, parents, and employers can motivate the generation to excellence. An education manifesto for the twenty-first century, *The Global Achievement Gap* is provocative and inspiring. It is essential reading for parents, educators, business leaders, policy makers, and anyone interested in seeing our young people succeed as employees and citizens. Fundamentals and Flaws of Standards-Based Testing Charlie DePascale, 2025-05-30. When put to the test, will standards-based reporting remain as fundamentally flawed as once feared, or can next generation approaches refine the system for the better? *Fundamentals and Flaws of Standards-Based Testing* offers an inside perspective on the technical challenges encountered during each phase of the assessment cycle. Careers in state testing are spent balancing technical, logistical, financial, political, psychological, sociocultural, emotional, and measurement considerations while keeping an eye on the educational goals of the state assessment program. This insightful and comprehensive book draws on measurement foundations and real-life experiences in state testing to discuss critical and still unresolved technical and policy challenges that are being inherited by today's assessment specialists and psychometricians. Going beyond core descriptions of psychometric and assessment development procedures and operational best practices in testing, this book exposes graduate students and scholars of educational measurement and policy, as well as testing industry professionals, to real-life pressures faced by those charged with designing, implementing, and maintaining a large-scale state assessment program. Standard setting, test design, score reporting, validation, and more are approached critically and with authentic context.
