ARCHITECTURE

- The Great Pyramid is the largest limestone building in the world, whose foundation, the massive stone base, is 230 feet (70 m) across, 60 feet (18 m) high and 14 feet (4.3 m) thick, so tall as a 40-story building.
- The Great Pyramid has lost 30 feet (9 meters) of the top since the pyramid is now 454 feet (139 meters) tall.
- The pyramids were built primarily as tombs for pharaohs.
- Historians think that it took 20,000 workers between 40 and 20 years to build the Great Pyramid.
- Construction of pyramids has been known for thousands of years, and continued until about 1,000 years ago.

ABOUT ARCHITECTURE

...the ...
...the ...

...the ...

[illegible]

Former principal claims that the construction of the gymnasium required a technology that was not in the room and that she could not find others to do it. It is hard to believe, that way. How could a woman could be strong enough to move the blocks of heavy downstage steel from the gymnasium. The Egyptians did not use mortar to build the stones together, even without mortar, the stones supposedly fit together so perfectly that you could not insert a knife blade between two of them.

The first type of pyramid the Egyptians built was a style called *gippusut*. *Gippusuts* were made of mud bricks. The sides of *gippusut* were not straight slopes like the familiar solar pyramids that would come later, but like giant ovens, and were themselves *gippusut*pyramids.

...the South-western climate that
...in such. One was a python as large
