Handbook of Research on Implementing Digital Reality

and Interactive Technologies to Achieve Society 5.0 Ugliotti, Francesca Maria, Osello, Anna, 2022-06-30 Research on digital reality has been extensive in recent years covering a wide range of topics and leading to new ways to approach and deal with complex situations Within the Society 5.0 paradigm people and machines establish a positive relationship to find solutions for social aspects and problems This perspective establishes a strong interconnection between physical and virtual space making the user an active player for better life and society In these terms digital systems and virtual and augmented reality technologies enable multi dimensional scenarios and additional levels of interdisciplinary collaboration to create a highly inclusive communication network and social framework The Handbook of Research on Implementing Digital Reality and Interactive Technologies to Achieve Society 5.0 provides an overview of methods processes and tools adopted to achieve super smart society needs by exploiting digital reality and interactive technologies It includes case studies that illustrate applications that place people's quality of life at the center of the digitalization process accessing and managing different information and data domains Covering topics such as cultural heritage interactive learning and virtual participation this major reference work is a comprehensive resource for business executives and managers IT managers government officials community leaders arts and performance organizers healthcare administrators and professionals faculty and administrators of both K-12 and higher education students of higher education researchers and academicians Ethnobotany Gary J.

Martin, 2014-07-29 Ethnoecology has blossomed in recent years into an important science because of the realization that the vast body of knowledge contained in both indigenous and folk cultures is being rapidly lost as natural ecosystems and cultures are being destroyed by the encroachment of development Ethnobotany and ethnozoology both began largely with direct observations about the ways in which people used plants and animals and consisted mainly of the compilation of lists Recently these subjects have adopted a much more scientific and quantitative methodology and have studied the ways in which people manage their environment and as a consequence have used a much more ecological approach This manual of ethnobotanical methodology will become an essential tool for all ethnobiologists and ethnoecologists It fills a significant gap in the literature and I only wish it had been available some years previously so that I could have given it to many of my students I shall certainly recommend it to any future students who are interested in ethnoecology I particularly like the sympathetic approach to local peoples which pervades this book It is one which encourages the ethnobotanical work by both the local people themselves and by academically trained researchers A study of this book will avoid many of the arrogant approaches of the past and encourage a fair deal for any group which is being studied This manual promotes both the involvement of local people and the return to them of knowledge which has been studied by outsiders Selection,
