Year Cornelia F. Mutel,2010-03-15 In June 2008 the rivers of eastern Iowa rose above their banks to create floods of epic proportions their amazing size flowing in places at a rate nearly double that of the previous record flood and the rapidity of

their rise ruined farmlands and displaced thousands of residents and hundreds of businesses In Cedar Rapids the waters inundated more than nine square miles of the downtown area in Iowa City where the flood was also the most destructive in history the University of Iowa's arts campus was destroyed By providing a solid base of scientific and technical information presented with unusual clarity and a wealth of supporting illustrations the contributors to this far reaching book many of whom dealt firsthand with the 2008 floods provide a detailed roadmap of the causes and effects of future devastating floods The twenty five essays fall naturally into four sections Rising Rivers Spreading Waters begins by comparing the 2008 floods with the midwestern floods of 1993 moves on to trace community responses to the 2008 floods and ends by illuminating techniques for forecasting floods and determining their size and frequency Why Here Why Now searches for possible causes of the 2008 floods and of flooding in general annual crops and urban landscapes inflows into and releases from reservoirs and climate change Flood Damages Flood Costs Flood Benefits considers the complex mix of flood costs and effects emphasizing damages to cities and farmlands as well as potential benefits to natural communities and archaeological sites Looking Back Looking Forward lays out approaches to managing the floods of the future that are sure to come While the book draws most of its examples from one particular region it explains flooding throughout a much larger region the midwestern Corn Belt and thus its sobering yet energizing lessons apply well beyond eastern Iowa By examining the relationships among rivers floodplains weather and modern society by stressing matters of science and fact rather than social or policy issues and by addressing multiple environmental problems and benefits A Watershed Year informs and educates all those who experienced the 2008 floods and all those concerned with the larger causes of flooding

Biofilms in the Food and Beverage Industries P M Fratamico, B A Annous, N W Guenther, 2009-09-22 When bacteria attach to and colonise the surfaces of food processing equipment and foods products themselves there is a risk that biofilms may form Human pathogens in biofilms can be harder to remove than free microorganisms and may therefore pose a more significant food safety risk Biofilms in the food and beverage industries reviews the formation of biofilms in these sectors and best practices for their control The first part of the book considers fundamental aspects such as molecular mechanisms of biofilm formation by food associated bacteria and methods for biofilm imaging quantification and monitoring Part two then reviews biofilm formation by different microorganisms Chapters in Part three focus on significant issues related to biofilm prevention and removal Contributions on biofilms in particular food industry sectors such as dairy and red meat processing and fresh produce complete the collection With its distinguished editors and international team of contributors Biofilms in the food and beverage industries is a highly beneficial reference for microbiologists and those in industry responsible for food safety Considers fundamental aspects concerning the ecology and characteristics of biofilms and considers methods for their detection Examines biofilm formation by different microorganisms such as salmonella and food spoilage Discusses specific issues related to biofilm prevention and removal such as cleaning and sanitation of food contact surfaces and food processing
