

speck of dust or whatever is on the actual face of that color's LCD panel. A low contrast defect indicates that the defect is elsewhere in the light path, such as on a filter or on the prism. Once it has been determined where the defect is located, the cleaning procedure should only be directed towards the offending color's light path. In other words, don't clean what isn't dirty, or you'll run the risk of making it worse. For instance, if it's been determined that the Red Panel needs to be cleaned, don't arbitrarily clean the Green and Blue panels also "just because you're already 'in there'."

The amount of time required to perform this procedure from start to finish will vary depending on numerous factors, such as familiarity with the product, the ability to physically get the product into a position to perform the procedure, proper utilization of tools, ability to read and comprehend the written English language, etc. Due to the complexity, a minimum of two (2) hours should be scheduled from start to finish of this procedure. As well, two (2) technicians, or one (1) technician and one (1) helper should be available, as some of the steps will be much easier with assistance, such as removing the top assembly, etc. Never request the assistance of the customer as this will potentially create a Pandora's Box of worms.

Required Materials:

1. Special Cleaning Swabs, *Hitachi p/n TWTX758B*
2. Isopropyl Alcohol, 99.8% pure, *procure locally*
3. Compressed Air, 100% Ultra-pure, *procure locally*

4. Cursor down until **VCOM** is hi-lighted.
5. Cursor right to access the **VCOM** adjustment. The adjust parameter value for **VCOM-R** will be displayed.
6. Cursor right or left to display full screen **RED**. Subsequent presses of the **SELECT** button will cycle through the three colors.
7. If necessary, the proper adjustment for each color's **VCOM** adjustment is made by observing each color and cursoring left or right to minimize the flicker.
