The SAGE Encyclopedia of LGBTQ Studies Abbie E. Goldberg, 2016-05-10 This far reaching and contemporary new Encyclopedia examines and explores the lives and experiences of Lesbian Gay Bisexual Transgender and Queer LGBTQ individuals focusing on the contexts and forces that shape their lives The work focuses on LGBTQ issues and identity primarily through the lenses of psychology human development and sociology emphasizing queer feminist and ecological perspectives on the topic and addresses questions such as What are the key theories used to understand variations in sexual orientation and gender identity How do Gay Straight Alliances GSA affect LGBTQ youth How do LGBTQ people experience the transition to parenthood How does sexual orientation intersect with other key social locations such as race to shape experience and identity What are the effects of marriage equality on sexual minority individuals and couples Top researchers and clinicians contribute to the 400 signed entries from fields such as Psychology Human Development Gender Queer Studies Sexuality Studies Social Work Sociology The SAGE Encyclopedia of LGBTQ Studies is an essential resource for researchers interested in an interdisciplinary perspective on LGBTQ lives and issues *Equity, Efficiency and Evolutionary Stability in Bargaining Games with Joint Production* Manfred Königstein, 2012-12-06 Result 1 10 Simple equity standards were superior to more complex ones even though the latter might be economically more relevant Result 1 11 Equity based on quantity input and return output was most successful and received a hit rate of almost i within a range of 10% i e within a

distance of 5% of the predicted share Result 1 12 A substantial share of observations is consistent with egalitarian considerations 1 7 Summary The study investigates the predictive power of equity theory and strategic concepts within ultimatum bargaining with advance production This is different from many other experimental studies on non cooperative bargaining games since usually the resource to be distributed between the subjects is given by the experimenter Here the pie is produced via joint production effort This scenario is more general than bargaining without production and we think it is more natural as well The description of the raw data showed that the production choices are considerably dispersed but nevertheless systematically biased toward the respective player's efficient production level The distributions of demanded return shares and demanded surplus shares partly replicated findings of other studies namely a low percentage of high demands and a considerable proportion of equal surplus splits But they also indicate that advance production compared to no production should be considered an important treatment in studies on ultimatum bargaining
