

1

When a fire occurs in a protected area, it is quickly sensed by detectors located in the ductwork or cooking appliance hood.

3

ANSUL-EX Low pH liquid fire suppressant flows through the piping and is discharged into the plenum and duct work and onto the cooking appliances.

2

The detectors trigger the ANSUL AUTOMANN release mechanism which actuates the system, pressurizing the agent storage tank and automatically shutting off appliance energy sources in the event of a fire.

4

The ANSUL-EX agent is applied directly on the fire in specific spray patterns, suppressing the fire in seconds. As it smothers the hot cooking greases, a foam blanket is formed, sealing off combustible vapors to help prevent fire reflash.
