**The Archaeologist's Manual for Conservation** Bradley A. Rodgers, 2007-05-08 This is a Foreword by an archaeologist not a conservator but as Brad Rodgers says Conservation has been steadily pulled from archaeology by the forces of specialization p 3 and he wants to remedy that situation through this manual He sees this work as a call to action for the non professional conservator permitting curators conservators and archaeologists to identify artifacts that need professional attention and allow these professionals to stabilize most artifacts in their own laboratories with minimal intervention using simple non toxic procedures p 5 It is the mission of Brad's manual to bring conservation back into archaeology p 6 The degree of success of that goal depends on the degree to which archaeologists pay attention to and put to use what Brad has to say because as he says The conservationist archaeologist is responsible to make preparation for an artifact's care even before it is excavated and after its storage into the foreseeable future a tremendous responsibility p 10 The manual is a combination of highly technical as well as common sense methods of conserving wood iron and other metals ceramics glass and stone organics and composites a far better guide to artifact conservation than was available to me when I first faced that archaeological challenge at colonial Brunswick Town North Carolina in 1958 a challenge still being faced by archaeologists today The stage of conservation in 1958 is in dramatic contrast to the procedures Brad describes in this manual conservation has indeed made great progress For instance a common procedure then was to heat the artifacts red hot in a furnace a method that made me cringe

Walsh, 1987-06-17 Methods in Protein Sequence Analysis 1986 brings together reports of the most recent methodology available to protein chemists for studying the molecular detail of proteins The papers in this volume constitute the proceedings of the Sixth International Conference on Methods in Protein Sequence Analysis which was held at the University of Washington in Seattle Washington on August 17 21 1986 This series of conferences has taken place during a period when new techniques in protein chemistry and molecular biology have enabled not only exploration of the control of protein function but also deduction of the genetic origin of proteins and laboratory generation of rare protein molecules for therapeutic and commercial use The current reports are focused on the means by which experimental questions can be answered rather than on the biological implications in specific systems The scope of the meeting was quite broad emphasizing microanalytical techniques and the relative merits of DNA sequencing mass spectrometry and more traditional degradation

techniques A highlight of the meeting was the growing awareness of the role of mass spectrometry in the analysis of proteins The complementarity of protein sequencing and DNA sequencing techniques was apparent throughout the discussions and several papers dealt with the strategy of obtaining sequence information from small amounts of protein in order that appropriate oligonucleotide probes could be constructed and the encoding nucleic acids sequenced and manipulated
