Isenberg,2017 The Oxford Handbook of Environmental History draws on a wealth of new scholarship to offer diverse perspectives on the state of the field     **The Nature of Data** Jenny Goldstein,Eric Nost,2022-10 When we look at some of the most pressing issues in environmental politics today it is hard to avoid data technologies Big data artificial intelligence and data dashboards all promise revolutionary advances in the speed and scale at which governments corporations conservationists and even individuals can respond to environmental challenges By bringing together scholars from geography anthropology science and technology studies and ecology The Nature of Data explores how the digital realm is a significant site in which environmental politics are waged This collection as a whole makes the argument that we cannot fully understand the current conjuncture in critical global environmental politics without understanding the role of data platforms devices standards and institutions In particular The Nature of Data addresses the contested practices of making and maintaining data infrastructure the imaginaries produced by data infrastructures the relations between state and civil society that data infrastructure reworks and the conditions under which technology can further socio ecological justice instead of re entrenching state and capitalist power This innovative volume presents some of the first research in this new but rapidly growing subfield that addresses the role of data infrastructures in critical environmental politics     *Informal Manufacturing and Environmental Sustainability* Mihir Kumar Pal,Pinaki Das,2024-12-02 The chapters here emerge against the backdrop of a rapidly evolving global landscape where the informal sector plays a pivotal role in employment income generation and economic development particularly in developing and emerging countries     Routledge Handbook of Science, Technology, and Society Daniel Lee Kleinman,Kelly Moore,2014-06-05 Over the last decade or so the field of science and technology studies STS has become an intellectually dynamic interdisciplinary arena Concepts methods and theoretical perspectives are being drawn both from long established and relatively young disciplines From its origins in philosophical and political debates about the creation and use of scientific knowledge STS has become a wide and deep space for the consideration of the place of science and technology in the world past and present The Routledge Handbook of Science Technology and Society seeks to capture the dynamism and breadth of the field by presenting work that pushes the reader to think about science and technology and their intersections with social life in new ways The interdisciplinary contributions by international experts in this handbook are organized around six topic areas embodiment consuming technoscience digitization environments science as work rules and standards This volume highlights a range of theoretical and empirical approaches to some of the persistent and new

questions in the field It will be useful for students and scholars throughout the social sciences and humanities including in science and technology studies history geography critical race studies sociology communications women s and gender studies anthropology and political science      Palm Oil Diaspora Case Watkins,2021-05-20 An environmental history and political ecology of palm oil in colonial Brazil the African diaspora and the Atlantic World      **Mountains: Physical, Human-Environmental, and Sociocultural Dynamics** Mark A. Fonstad,2018-12-07 Mountains have captured the interests and passions of people for thousands of years Today millions of people live within mountain regions and mountain regions are often areas of accelerated environmental change This edited volume highlights new understanding of mountain environments and mountain peoples around the world The understanding of mountain environments and peoples has been a focus of individual researchers for centuries more recently the interest in mountain regions among researchers has been growing rapidly The articles contained within are from a wide spectrum of researchers from different parts of the world who address physical political theoretical social empirical environmental methodological and economic issues focused on the geography of mountains and their inhabitants The articles in this special issue are organized into three themed sections with very loose boundaries between themes 1 physical dynamics of mountain environments 2 coupled human physical dynamics and 3 sociocultural dynamics in mountain regions This book was first published as a special issue of the Annals of the American Association of Geographers      *Fields and Streams* Rebecca Lave,2012-11-01 Examining the science of stream restoration Rebecca Lave argues that the neoliberal emphasis on the privatization and commercialization of knowledge has fundamentally changed the way that science is funded organized and viewed in the United States Stream restoration science and practice is in a startling state The most widely respected expert in the field Dave Rosgen is a private consultant with relatively little formal scientific training Since the mid 1990s many academic and federal agency based scientists have denounced Rosgen as a charlatan and a hack Despite this Rosgen s Natural Channel Design approach classification system and short course series are not only accepted but are viewed as more legitimate than academically produced knowledge and training Rosgen s methods are now promoted by federal agencies including the Environmental Protection Agency the U S Forest Service the U S Fish and Wildlife Service and the Natural Resources Conservation Service as well as by resource agencies in dozens of states Drawing on the work of Pierre Bourdieu Lave demonstrates that the primary cause of Rosgen s success is neither the method nor the man but is instead the assignment of a new legitimacy to scientific claims developed outside the academy concurrent with academic scientists decreasing ability to defend their turf What is at stake in the Rosgen wars argues Lave is not just the ecological health of our rivers and streams but the very future of environmental science      **The Palgrave Handbook of Critical Physical Geography** Rebecca Lave,Christine Biermann,Stuart N.
