

# The Principles of Hip Joint Preservation

- Three primary anatomic factors must be considered for preservation of the hip joint:
  - Femoroacetabular impingement (FAI)
  - Acetabular dysplasia
  - Femoral rotational abnormalities (excessive anteversion)
- Each factor affects the integrity of the labrum and femoroacetabular cartilage
- All factors should be assessed in patients presenting with pre-arthritic hip pain

### Abnormalities and surgical treatment (right hip) may include:

#### FAI

#### Femoroplasty

#### Acetabular dysplasia

#### Periacetabular osteotomy

#### Femoral rotational abnormalities

#### De-rotational femoral osteotomy

For a successful outcome, careful preoperative planning is necessary to address all factors
