James Taylor,2018-09-23 The second generation Range Rover was arguably Land Rover's first model designed as a luxury vehicle. It was a major leap for the company but a very successful one as well. Despite controversy over its looks and some initial teething problems it became a worthy successor to the much loved original Range Rover. Second Generation The Complete Story draws on the memories of designers and engineers as well as on a wide variety of factory sources to provide the most authoritative history of the model yet. The book covers the full development history, the changes during eight years of production, Range Rovers for the North American market, full technical specifications and finally Range Rovers and the emergency services. A companion volume to the author's Range Rover First Generation The Complete Story. Crowood 2018

Designing Interaction and Interfaces for Automated Vehicles Neville Stanton, Kirsten M. A. Revell, Patrick Langdon, 2021-03-10 Driving automation and autonomy are already upon us and the problems that were predicted twenty years ago are beginning to appear. These problems include shortfalls in expected benefits, equipment unreliability, driver skill fade and error-inducing equipment designs. Designing Interaction and Interfaces for Automated Vehicles: User Centred Ecological Design and Testing investigates the difficult problem of how to interface drivers with automated vehicles by offering an inclusive human-centred design process that focusses on human variability and capability in interaction with interfaces. This book introduces a novel method that combines both systems thinking and inclusive user-centred design. It models driver interaction, provides design specifications, concept designs and the results of studies in simulators on the test track and in road-going vehicles. This book is for designers of systems, interfaces, interactions, UX, Human Factors and Ergonomics researchers and practitioners involved with systems engineering and automotive academics.

In this book Prof Stanton and colleagues show how Human Factors methods can be applied to the tricky problem of interfacing human drivers with vehicle automation. They have developed an approach to designing the human-automation interaction for the handovers between the driver and the vehicle. This approach has been tested in driving simulators and most interestingly in real vehicles on British motorways. The approach called User Centred Ecological Interface Design has been validated against driver behaviour and used to support their ongoing work on vehicle automation. I highly recommend this book for anyone interested or involved in designing human-automation interaction in vehicles and beyond. Professor Michael A. Regan, University of NSW, Sydney, AUSTRALIA
