

The book cover features a watercolor-style illustration. At the top, several pink pigeons are shown in flight against a light pink background. Below them, a dark, rocky ledge frames the title. The title itself is written in a serif font. Underneath the title, there are more illustrations: a golden bat on the left and two black bats on the right, set against a background of yellow and orange washes. At the bottom, a dark purple band contains the author's name in a script font.

Golden Bats And Pink Pigeons:

Golden Bats and Pink Pigeons Gerald Durrell, 2017-02-21 Travel to Mauritius on a quest to save endangered species with the British naturalist whose work inspired Masterpiece production The Durrells in Corfu The green and mountainous island of Mauritius in the Indian Ocean was once the home of the ill fated dodo The island saw many other animals vanish from its soil and by the 1970s numerous species were close to being eliminated Enter Gerald Durrell Durrell sets out on a search for bats and pink pigeons climbing near vertical rock faces to find Telfair's skinks and Gunther's geckos and swimming about coral reefs with multicolored marine life But rounding up a collection to take back with him to his animal sanctuary in the English Channel won't be easy There are many dangers awaiting him Golden Bats and Pink Pigeons is a delightful and inspiring adventure by the author of My Family and Other Animals among other much loved memoirs This ebook features an illustrated biography of Gerald Durrell including rare photos from the author's estate **Golden Bats and Pink Pigeons** Gerald Durrell, 1982 **Golden Bats and Pink Pigeons** Gerald Malcolm Durrell, 1985 **Golden Bats and Pink Pigeons** Muḥammad ibn Ibrāhīm Ibn 'Abbād, 1979 **Rewilding** Paul Jepson, Cain Blythe, 2022-04-05 How rewilding has transformed the conservation movement combining radical scientific insights with practical innovations Progressive scientists and conservation professionals are pursuing a radical new approach to restoring ecosystems rewilding By recovering the ripple effect generated by the interactions among plant and animal species and natural disturbances rewilding seeks to repair ecosystems by removing them from human engineering and reassembling guilds of megafauna from a mix of surviving wild and feral species and de domesticated breeds including elk bison and feral horses Written by two leaders in the field this book offers an abundantly illustrated guide to the science of rewilding It shows in fascinating detail the ways in which ecologists are reassembling ecosystems that allow natural interactions rather than human interventions to steer their environmental trajectories Rewilding looks into a past in which industrialization and globalization downgraded grasslands describes current projects designed to recover self-willed ecosystems and envisions the future with ten predictions for a rewilded planet It shows how rewilding is shaking up conservation science and policy bringing new hope and renewed purpose to efforts to revive essential ecological processes Color illustrations capture moments of beauty in nature and offer enlightening infographics and visualizations **The Birds World** Nicolae Sfetcu, 2021-10-25 Birds are among the most extensively studied of all animal groups Hundreds of academic journals and thousands of scientists are devoted to bird research while amateur enthusiasts called birdwatchers or more commonly birders probably number in the millions Birds are categorised as a biological class Aves The earliest known species of this class is Archaeopteryx lithographica from the Late Jurassic period According to the most recent consensus Aves and a sister group the order Crocodilia together form a group of unnamed rank the Archosauria Phylogenetically Aves is usually defined as all descendants of the most recent common ancestor of modern birds or of a specific modern bird species like Passer domesticus

and Archaeopteryx Modern phylogenies place birds in the dinosaur clade Theropoda Modern birds are divided into two superorders the Paleognathae mostly flightless birds like ostriches and the wildly diverse Neognathae containing all other birds

Bat Tessa Laird, 2018-05-15 Bats have been maligned in the West for centuries Unfair associations with demons have seen their leathery wings adorn numerous evil characters from the Devil to Bram Stoker's Dracula But these amazing animals are ecological superheroes Nectar feeding bats pollinate important crops like agave fruit eating bats disperse seeds and encourage reforestation and insect eating bats keep down mosquito populations and other pests saving agricultural industries billions of dollars Ranging in size from a bumblebee to creatures with a wingspan the length of an adult human found on all continents except Antarctica and displaying extraordinary abilities like echolocation a built in sonar system that enables many bats to navigate in the dark these incredibly diverse mammals are as surprising as they are misunderstood In *Bat* Tessa Laird challenges our preconceptions as she combines fascinating facts of bat biology with engaging portrayals of bats in mythology literature film popular culture poetry and contemporary art She also provides a sobering reminder of the threats bats face worldwide from heatwaves and human harassment to wind turbines and disease Illustrated with incredible photographs and artistic representations of bats from many different cultures and eras this celebration of the only mammals possessing true flight will enthrall batty fans skeptics and converts alike

Lost Land of the Dodo Anthony Cheke, Julian P. Hume, 2009-01-01 The Mascarene islands in the southern Indian Ocean Mauritius Reunion and Rodrigues were once home to an extraordinary range of birds and reptiles Evolving on these isolated volcanic islands in the absence of mammalian predators or competitors the land was dominated by giant tortoises parrots skinks and geckos burrowing boas flightless rails the birds and tortoises were slaughtered indiscriminately while introduced rats cats pigs and monkeys destroyed their eggs the once extensive forests logged and invasive introduced plants from all over the tropics devastated the ecosystem The now familiar icon of extinction the Dodo was gone from Mauritius within 50 years of human settlement and over the next 150 years many of the Mascarenes other native vertebrates followed suit The product of over 30 years research by Anthony Cheke *Lost Land of the Dodo* provides a comprehensive yet hugely enjoyable account of the story of the islands changing ecology interspersed with human stories the islands biogeographical anomalies and much else Many French publications old and new especially for Reunion are discussed and referenced in English for the first time The book is richly illustrated with maps and contemporary illustrations of the animals and their environment many of which have rarely been reprinted before Illustrated box texts look in detail at each extinct vertebrate species while Julian Hume's superb colour plates bring many of the extinct birds to life *Lost Land of the Dodo* provides the definitive account of this tragic yet remarkable fauna and is a
