

Building reinforced, diaphragm and wide plan freestanding walls

This Guide, for builders, designers and planners, presents rule of thumb guidance for stable construction of a range of common brick or blockwork wall types. Separate values for wall height and foundation width are given for increasing levels of exposure across the UK and solutions can be compared with complementary advice published for simple plan unreinforced walls (Good Building Guide 14).

The Guide includes notes on materials selection and good construction practice. The need for good supervision is stressed, particularly with reinforced walls, where a number of quite different building operations are involved which require careful coordination and execution.

The advice in this guide allows walls to be built up to a height of 2.5 m. Before starting you should check local planning restrictions, which may limit walls to a maximum height of 2 m or less.

Reducing carbon emissions from UK business Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2008-03-10 The Climate Change Levy package is the second biggest element in the UK Climate Change Programme and savings appear to have been significant but were strongly front end loaded and have eased off since soon after its introduction The Levy will reduce annual UK CO2 emissions by 12.8 million tonnes by 2010 But these savings have come mainly from the effect its announcement had on raising awareness of the potential for energy savings and most of these savings were the result of actions taken before the tax actually came into operation The Levy itself has had relatively little effect on business emissions especially in the case of SMEs and large but non energy intensive organisations The Government believes that Climate Change Agreements CCAs will reduce annual CO2 emissions by an additional 7 million tonnes by 2010 Complying with CCAs has galvanised business interest in finding energy savings and that key to this has been the incentive of the tax discount they offer The exemptions on the Climate Change Levy for green electricity and combined heat and power have had minimal effect on the construction of new renewables and CHP capacity essentially because they are worth too little money The CCL package does not impose a damaging economic burden on UK business overall and is encouraging greater resource productivity and stimulating energy efficient industries The CCL has not worked quite as expected Instead of rationally seeking to reduce their costs through increased energy efficiency businesses appear to have needed an extra stimulus to change their approach to energy use This has profound implications for climate change policy more widely If even large companies require additional policies to drive behavioural change this must be all the more true for small businesses public bodies and private households *Delay and Disruption in Construction Contracts* Andrew Burr, 2016-02-05 Delay and disruption in the course of construction impacts upon building projects of any scale Now in its 5th edition *Delay and Disruption in Construction Contracts* continues to be the pre eminent guide to these often complex and potentially costly issues and has been cited by the judiciary as a leading textbook in court decisions worldwide see for example *Mirant v Ove Arup* 2007 EWHC 918 TCC at 122 to 135 per the late His Honour Judge Toulmin CMG QC Whilst covering the manner in which delay and disruption should be considered at each stage of a construction project from inception to completion and beyond this book includes An international team of specialist advisory editors namely Francis Barber insurance Steve Briggs time Wolfgang Breyer civil law Joe Castellano North America David John Gibbs BIM Wendy MacLaughlin Pacific Rim Chris Miers dispute boards Rob Palles Clark money and Keith Pickavance

Heating Systems, Plant and Control Antony R. Day, Martin S. Ratcliffe, Keith Shepherd, 2008-04-15 In many climates buildings are unable to provide comfort conditions for year round occupancy without the benefit of a heating system and most HVAC engineers will routinely be involved with issues concerning the design installation and performance of such systems Furthermore in temperate climates heating of buildings accounts for a large slice of annual carbon emissions The design of heating systems for maximum efficiency and minimum carbon emission is therefore now a matter of prime concern to all HVAC engineers The book provides an up to date review of the design engineering and control of modern heating systems Part A deals with heat generating plant While this concentrates on conventional and condensing boilers small scale combined heat and power systems and heat pumps are also discussed Part B deals with heat emitters pipe circuits and variable speed pumping hot water service optimum plant size and the vital issues of plant and system control including sequence control of multiple boilers Techniques for managing the energy use and running costs of heating systems are also discussed The authors have brought together over a half century of combined experience covering all aspects of the building services Industry to provide an up to date and comprehensive text that is both technically rigorous yet highly practical This makes the book equally relevant to the busy HVAC engineer looking for a handy practical reference the student looking to build on their basic knowledge or the researcher interested in key issues of heating

system design and performance **The Business of Greening** Stephen Fineman, 2017-10-19 The Business of Greening first published in 2000 debates the relationship between business and greening and the future form this relationship could take The book gives voice to industrial actors employees employers managers technical specialists regulators in the context of their organizations within industrial sectors or as part of wider institution regimes The business of greening is taken as socially constructed shaped through tensions and competing interests It produces outcomes that are sometimes unexpected sometimes hopeful These outcomes are explored by examining a range of workers including estate agents bankers bakers printers regulators in small and large corporations Contributors write from a wide range of different social sciences including sociology geography organizational science and psychology This title will be of particular interest to students and researchers of environmental and business studies and to those who shape environmental policy in government and industry
