Local Energy Governance Magali Dreyfus, Aki Suwa, 2022-03-30 Local Energy Governance Opportunities and Challenges for Renewable and Decentralised Energy in France and Japan examines the extent of the energy transition taking place at a local level in France and Japan two countries that share ambitious targets regarding the reduction of GHG emissions their share of renewable energy and their degree of market liberalization This book observes local energy policies and initiatives and applies an institutional and legal analysis to help identify barriers but also opportunities in the development of renewable energies in the territories The book will highlight governance features that incubate energy transition at the local level through interdisciplinary contributions that offer legal political sociological and technological perspectives Overall the book will draw conclusions that will also be informative for other countries aiming at promoting renewable energies This book will be of great interest to students and scholars of energy policy and energy governance Local Energy Autonomy Fanny

Lopez, Margot Pellegrino, Olivier Coutard, 2019-07-30 In recent years interest for local energy production supply and consumption has increased in academic and public debates In particular contemporary energy transition discourses and strategies often emphasize the search for increased local energy autonomy a phrase which can refer to a diverse range of configurations both in terms of the spaces and scales of the local territory considered and in terms of what is meant by energy autonomy This book explores policies projects and processes aimed at increased local energy autonomy with a particular focus on their spatial infrastructural and political dimensions In doing so the authors Sabine Barles Bruno Barroca Guilhem Blanchard Benoit Boutaud Arwen Colell Gilles Debizet Ariane Debourdeau Laure Dobigny Florian Dupont Z lia Hampikian Sylvie Jaglin Allan Jones Raphael M nard Alain Nada Angela Pohlmann Cyril Roger Lacan Eric Vidalenc improve our understanding of the always partial and controversial processes of energy relocation that articulate forms of local metabolic self sufficiency socio technical decentralization and political empowerment Comprising fifteen chapters the book is divided into four parts Governance and Actors Urban Projects and Energy Systems Energy Communities and The Challenges of Energy Autonomy **Les territoires de l'autonomie énergétique** Fanny Lopez, Margot Pellegrino, Olivier

Coutard, 2019-09-01 L'intérêt pour la production l'approvisionnement et la consommation d'énergie locale grandit dans les débats universitaires et publics Les discours et les stratégies de transition énergétique mettent souvent l'accent sur la recherche d'une plus grande autonomie énergétique expression qui se réfère des configurations diverses tant en termes d'espaces urbains ruraux ou périphériques et d'échelles qu'en termes politiques Les territoires de l'autonomie énergétique explore les liens entre les formes de relocalisation production et consommation d'énergie les jeux d'acteurs sous-jacents et les usages de l'énergie affrrents ainsi que les interdépendances entre infrastructures de petite et de grande échelles Cet ouvrage explicite et analyse des processus souvent partiels et controversés de la relocalisation énergétique qui articulent des formes d'autosuffisance métabolique locale de décentralisation socio technique et de responsabilisation politique et se concentre sur les acteurs comme

sur les projets urbains et communaut s nerg tiques avant d aborder les d fis de l autonomie nerg tique *Energy Autonomy* Benoit Boutaud, 2022-09-21 Energy autonomy is an emerging concept that is as yet poorly identified in France It can mean taking ownership of certain issues related to energy its production or indeed becoming self sufficient and it can apply equally to individuals communities and buildings While there are numerous new developments renewable energies smart grids and self consumption it is becoming difficult to know what this idea of autonomy covers just as it is difficult to define independence and self sufficiency which are often associated with it However these three concepts are key to thinking about the energy system and deciding its future Covering distinct ideas they are often reduced to economic and productive factors This ambiguity in their meanings is responsible for the misunderstandings delusions and obstacles that hamper the implementation of the energy transition This book deconstructs the common idea of autonomy in favor of a set of more operational concepts It demonstrates that these ideas are not interchangeable but rather represent practical and constructive tools for action The world of energy is changing and therefore we must rethink energy autonomy

Cross-Border Renewable Energy Transitions Philippe Hamman, 2021-12-26 This book explores the intrinsically multiscale issue of renewable energy transition from a local national and transnational perspective and provides insights into current developments in the Upper Rhine Region that can serve as an international model Organised around the exploration of stakeholder issues the volume first describes a framework for public action and modelling and then articulates a triple complementary focus from the viewpoint of law economics and sociology This multidisciplinary approach is anchored in the social sciences but also explores the ways in which technological issues are increasingly debated in the implementation of the ecological transition With a focus on the Upper Rhine Region of France Germany and Switzerland the contributions throughout analyse how concrete regional projects emerge and whether they are carried out by local authorities private energy groups network associations or committed citizens From this it appears that real world energy transition modes can be best understood as permanent transactional processes involving institutional regulations economic levers and barriers and social interactions This book will be of interest to advanced students and scholars focusing on renewable energy transition stakeholder issues environment and sustainability studies as well as those who are interested in the methodological aspects of the social sciences especially within the fields of sociology law economy geography political science urbanism and planning *Innovation et transition techno-écologique* Fabienne Picard, Corinne Tanguy, 2017-06-01 La s rie Smart innovation pr sente les th mes li s la dynamique technologique entrepreneuriale territoriale et conomique de l innovation Elle privil gie les approches novatrices des acteurs qui par leurs comportements strat gies et politiques d innovation intelligente modifient les mod les conomiques dans une perspective de croissance durable L adoption de la loi sur la transition nerg tique pour la croissance verte et la tenue de la XXIe dition de la Conf rence Climat de l ONU t moignent d une prise de conscience individuelle et collective des impacts de l activit humaine sur l environnement Cet ouvrage traite de la mise en oeuvre des

programmes bilatéraux constituent un outil prometteur pour la valorisation des synergies inexploitées. En permettant la mise en place de partenariats franco-allemands restreints autour de thématiques précises, ils constituent en effet un outil complémentaire aux programmes européens. Le Programme Inter Carnot Fraunhofer PICF constitue un exemple abouti de programme bilatéral ayant permis la concrétisation de collaborations mutuellement bénéfiques dans le domaine des NTE grâce à la mise au point d'une procédure harmonisée. Néanmoins, l'analyse du PICF montre également que les programmes bilatéraux franco-allemands devront prévoir la possibilité de financements relais afin de pérenniser les échanges. Dans le contexte particulier des NTE, une extension aux projets de démonstration ainsi qu'un ciblage des sujets porteurs sur la base d'un comité consultatif scientifique indépendant paraissent indispensables. Ces efforts franco-allemands pourront servir de modèle à l'innovation de rupture basée sur la valorisation des synergies intra-européennes.

DE Im Kontext steigender Umweltbelastungen stellen Innovationen auf dem Gebiet der Energietechnologien eine zentrale Herausforderung dar. Dieser rapide wachsende Markt ist schon heute der Schauplatz eines erbitterten internationalen Wettbewerbs. Somit stellt die Energieforschung für Europa eine mehrfache Herausforderung dar. Die entwickelten Technologien sollen dabei helfen unsere Treibhausgasemissionen zu verringern und gleichzeitig unsere Abhängigkeiten beschränken. Zudem soll die produzierte Innovation dazu beitragen den Industriestandort Europa als Spitzenreiter auf dem weltweit umkämpften Markt der Energietechnologien zu positionieren.

Dank der sich stark ergrenzenden nationalen Forschungslandschaften birgt die deutsch-französische Energieforschungskoooperation ein besonders hohes Potenzial. Bilaterale Forschungsprogramme sind ein vielversprechendes Werkzeug um ungenutzte Synergien zu fördern. Indem gezielt deutsch-französische Partnerschaften um bestimmte Fragestellungen angesprochen werden, vervollständigen bilaterale Programme die europäischen Förderwerkzeuge. Das Programm Inter Carnot Fraunhofer PICF ist ein ausgereiftes Beispiel eines solchen Programms. Dank harmonisierter Prozeduren konnten gegenseitig vorteilhafte Kooperationsprojekte im Energiebereich verwirklicht werden. Die Untersuchung des PICF zeigt allerdings auch, dass bilaterale Förderprogramme die Möglichkeit einer Anschlussfinanzierung beinhalten müssen, um die angegangene Zusammenarbeit zu erhalten und zur Vollendung zu bringen.

Im Kontext der Energieforschung sollten ebenfalls Demonstrationsprojekte in die Zielgruppe der bilateralen Förderprogramme aufgenommen werden. Ausschreibungen sollten thematisch eingegrenzt werden, fußt auf den Empfehlungen eines unabhängigen wissenschaftlichen Gremiums. Die deutsch-französischen Bestrebungen werden als Beispiel dafür dienen, wie innereuropäische Synergien zu bahnbrechender Innovation geführt werden können.

EN In the context of increasing environmental concerns, innovation in the field of energy technologies represents a central bottleneck. This rapidly growing market is already the scene of fierce international competition. Energy research therefore represents a multiple challenge for Europe. The technologies developed should help reducing greenhouse gas emissions while at the same time limiting our dependencies. In addition, the innovation produced should help positioning industrial Europe as a frontrunner in the globally competitive

energy technology market Thanks to the highly complementary national research landscapes the Franco German energy research cooperation has particularly high potential Bilateral research programs are a promising tool for promoting untapped synergies By addressing bilateral Franco German partnerships on specific issues bilateral programs complete the European funding tools The Inter Carnot Fraunhofer PICF program is a mature example of such a program Thanks to harmonized procedures mutually beneficial cooperation projects in the energy sector could be realized The PICF investigation also shows however that bilateral funding programs must include the possibility of follow up funding in order to maintain the cooperation and bring it to completion In the context of energy research demonstration projects should also be included in the target group of the bilateral funding programs Calls for proposals should be thematically limited based on the recommendations of an independent scientific body Franco German endeavors could then serve as a model of how intra European synergies can be transformed into groundbreaking innovation
