

Equipment

HAMMER TYPE

Multi-Impact Spring Hammer

(24, 3000)

Jaques Hammer mills are built especially to reduce limestone and other relatively non-plastic materials to "fines" (200 mesh). Based on the new, spring-type hammer, featuring all their weight concentrated at the point of impact and rotating at high speed, these mills reduce the material with unusual efficiency. Low maintenance, prompt removal hammer plates in the hammer and free passage for the material from point of pulverizing is carried out on the material before it reaches the screening grids, thereby increasing wear on the hammers and grids.

These compact, sturdy mills, with hammer bearing housings are made in six sizes ranging 12" to 36" diameter in the vertical position in two operation. High percentage of fine work (over 90%) are produced — discharge ports for screening are set to suit requirements. They can be installed either open top or enclosed for trouble-free, continuous screening without any extra expense.

GYRATORY TYPES

Gyrax — Size 14"

Light Weight but Sturdy
High Efficiency
Low Feed Rate

The Gyrax Fine Reduction Crusher is a lightweight crusher combining power strength with an unusually high efficiency.

The Traxler design of ball feed and spread screens fixed in these crushers eliminates setting and grinding between crushing faces.

The construction is uncomplicated and easy to handle after bearings, and the screens, shaft and gears are all mounted in oil-air bath of circulating pump cooled for a large oil reservoir.

These crushers are suitable for working at extremely fine settings, and by reason of their light weight, low feed rate and low power consumption are particularly adaptable for use with small portable crushing plants and specialized fine crushing applications in process industries.

Can be equipped with either bar or conical driving pulley.

Traxler 'TY' and 'TZ'

(24, 3000, 12, 12, 12, 12, 12, 12)

Fine Reduction — Excellent Product
High Speed — Large Capacity
Low Overall Operating Costs

These crushers are manufactured under license to the Traxler Eng. & Mfg. Company of Pittsburgh, Pa., U.S.A. Type 'TY' and 'TZ' crushers are compact machines combining both fine screen and ball screen feed and screen surfaces to insure thorough, rapid efficiency and very minimum wear between the faces — all cast heavy, self-aligning, ball feed and spread screens or all-cast ball feed and spread screens without discharge and a self-aligning mechanism internally fixed with roller bearings.

The same capacity and efficiency of Traxler Gyration Crushers is due to the advanced design of the ball feed and spread screens.

Crushing is assisted by increasing the capacity of each screening feeding zone — power requirements are reduced, even at fine settings for producing a grade just over the screen, instead of a coarse crushing face. The minimum clearance between screen material and crushing surfaces greatly increases the life of these parts. Ideal for secondary and tertiary crushing operations.

ROLL TYPE

Double Crushing Roll

(24, 3000, 12, 12, 12, 12, 12, 12)

Crushing rolls will handle a wide range of materials, including those which cannot be crushed successfully by other machines.

The product from crushing rolls is generally intermediate in size between that of the reduction crusher and grinding mills.

The spacing capacity of rolls being broken, they should be selected of ample diameter to produce the largest material in the feed.

Rolls have wide free space of crushing rolls for combining capacity of screen capacity. There is usually no bar or conical plate between the rolls and shaft.

Rolls should be set up in a way to crush material, usually hard, composed of soft, brittle and/or shelled material, or soft, for other coarse feed, composed of soft, brittle, or shelled material.

Roller buffers or springs are fitted to provide the necessary crushing pressure and prevent the material roll to become should undesirable substances enter the machine.

Feeding Equipment

PLATE APRON TYPE

(24, 3000, 12, 12, 12, 12, 12, 12)

These feeders are manufactured with frames in the Jaques Eng. & Mfg. Company of Pittsburgh, Pa., U.S.A. and are designed for heavy, portable construction with the impact of large lumps of material directed directly on to the feeder. They are most satisfactory when used with an impact crusher, a solid surface and are made in four sizes, ranging from 12" to 36" diameter in the vertical position in two operation. High percentage of fine work (over 90%) are produced — discharge ports for screening are set to suit requirements. They can be installed either open top or enclosed for trouble-free, continuous screening without any extra expense.

PAN TYPE

(24, 3000, 12, 12, 12, 12, 12, 12)

These feeders are manufactured with frames in the Jaques Eng. & Mfg. Company of Pittsburgh, Pa., U.S.A. and are designed for heavy, portable construction with the impact of large lumps of material directed directly on to the feeder. They are most satisfactory when used with an impact crusher, a solid surface and are made in four sizes, ranging from 12" to 36" diameter in the vertical position in two operation. High percentage of fine work (over 90%) are produced — discharge ports for screening are set to suit requirements. They can be installed either open top or enclosed for trouble-free, continuous screening without any extra expense.

Other common good construction with portable impact crusher, or suitable sized hydraulic control units can be for the making.
