Fig. 15. Tightening the cylinder head nuts

and cover the guide pins in the slots in the mounting bracket.

Fit the cylinder head gasket so that the side marked "Top" is towards the cylinder head casting, with the gasket on the cylinder block. Then turn the cylinder head stud from the front on the left-hand side to a desired stud.

Fit the timing plug lead carrier to the 3rd and 4th studs on the right-hand side. Fit plain washers to the 1st and 2nd studs on the left-hand side and the two front stud positions and "D" washers in the remaining studs. Tighten the front-most large cylinder head down nuts a part of a turn at a time to a torque of 34 lb. ft. (7.5 kg. m.) in the order shown in Fig. 15. Also tighten the six nuts securing the front end of the cylinder head.

VALVE TIMING

Check that the No. 1 (front) piston is exactly in the T.D.C. position.

Through the breather aperture in the front of the cylinder head slacken the lock nut securing the adjusted plate.

With the camshaft sprocket on the flange of the camshaft, remove chain by passing locking plunger upwards and rotating adjusted plate by the two holes in an anti-clockwise direction.

When correctly tensioned there should be slight flexibility on both outer ends of the chain below the

camshaft sprockets, that is the chain must not be dead tight. Release the locking plunger and securely tighten the locknut. Tap the camshaft sprockets off the flange of the camshaft.

Accurately position the camshaft with the valve timing gauge, and check that the T.D.C. marks are in exact alignment.

Withdraw the circlips retaining the adjusting plates to the camshaft sprockets and pull the adjusting plates forward until the retainers disengage. Replace the sprockets on to the flange of camshaft and align the two holes in the adjuster plate with the two tapped holes in each camshaft flange. Engage the retainers of the adjuster plates with the retainers in the sprockets.

Note: It is most important that the holes are in exact alignment, otherwise when the retainers are fitted the camshaft will be moved out of position. If difficulty is experienced in aligning the holes exactly, the adjuster plates should be turned through 180°, which, due to the construction of the plate, will facilitate alignment.

Fit the circlips to the sprockets and use retainers to the adjustable hole in each adjuster plate. Turn the engine until the other two holes are accessible and fit the two remaining retainers.

Finally, recheck the timing chain tension and timing in this order. Secure the four retainers retaining the camshaft sprockets with new lock wire.
