Cross, 2011-05-03 This is the third in a series of compendiums devoted to the subject of weld hot cracking It contains 22 papers presented at the 3rd International Hot Cracking Workshop in Columbus Ohio USA in March 2010 In the context of this workshop the term hot cracking refers to elevated temperature cracking associated with either the weld metal or heat affected zone These hot cracking phenomena include weld solidification cracking HAZ and weld metal liquation cracking and ductility dip cracking The book is divided into three major sections based on material type specifically aluminum alloys steels and nickel base alloys Each of these sections begins with a keynote paper from prominent researchers in the field Dr Sindo Kou from the University of Wisconsin Dr Thomas Böllinghaus from BAM and the University of Magdeburg and Dr John DuPont from Lehigh University The papers contained within include the latest insight into the mechanisms associated with hot cracking in these materials and methods to prevent cracking through material selection process modification or other means The three Hot Cracking Phenomena in Welds compendiums combined contain a total of 64 papers and represent the best collection of papers on the topic of hot cracking ever assembled

*Hot Cracking Phenomena in Welds II* Thomas Böllinghaus, Horst Herold, Carl E. Cross, J C Lippold, 2008-08-07 Failure of welded components can occur during service as well as during fabrication Most common analyses of the resistance of welded components against failure are targeted at crack avoidance Such evaluations are increasingly carried out by modern weldability studies i e considering interactions between the selected base and filler materials structural design and welding process Such weldability investigations are particularly targeted to prevent hot cracking as one of the most common cracking phenomena occurring during weld fabrication To provide an international information and discussion platform to combat hot cracking an international workshop on Hot Cracking Phenomena in Welds has been created based on an initiative of the Institute for Materials and Joining Technology at the Otto von Guericke University in Magdeburg and the Division V 5 Safety of Joined Components at the Federal Institute for Materials Research and Testing BAM in Berlin Germany The first workshop was organized in Berlin under the topics mechanisms and phenomena metallurgy and materials modelling and simulations as well as testing and standardization It consisted of 20 individual contributions from eight countries which were compiled in a book that found a very ready market not only in the welding community As a consequence of increasing interest it has been decided to establish the Workshop on Hot Cracking Phenomena in Welds as a regular event every three years embedded in the International Institute of Welding IIW Attached to the IIW Commission IX and II Spring intermediate meetings the second workshop was organized in March 2007

*Hot Cracking Phenomena in Welds* Thomas Böllinghaus, Horst Herold, 2005-10-20 Although the avoidance of hot cracking still represents a major topic in modern fabrication welding components the phenomena have not yet been fully understood Through the 20 individual contributions from experts all over the world the present state of knowledge about hot cracking

during welding is defined and the subject is approached from four different viewpoints The first chapter provides an overview of the various hot cracking phenomena Different mechanisms of solidification cracking proposed in the past decades are summarized and new insight is particularly given into the mechanism of ductility dip cracking The effects of different alloying elements on the hot cracking resistance of various materials are shown in the second chapter and as a special metallurgical effect the initiation of stress corrosion cracking at hot cracks has been highlighted The third chapter outlines how numerical analyses and other modelling techniques can be utilized to describe hot cracking phenomena and how such results might contribute to the explanation of the mechanisms Various hot cracking test procedures are presented in the final chapter with a special emphasis on standardization For the engineering and natural scientists in research and development the book provides both new insight and a comprehensive overview of hot cracking phenomena in welds The contributions additionally give numerous individual solutions and helpful advice for international welding engineers to avoid hot cracking in practice Furthermore it represents a very helpful tool for upper level metallurgical and mechanical engineering students
