The book demonstrates how new houses can be designed to be more sustainable and ergonomic Specifically it describes a prototype building that could be constructed in the near future Responding to some of the poor standards of mass estate housing in the UK and its out of date space standards it contributes towards improving the current status quo by describing a house design including drawings that can compete with today s mass housing The author examines the traditional geometrical reliance on the square in the design of houses and the planning of housing estates and promotes instead the adoption of polygonal forms This is explained using geometric analysis diagrams and references to existing housing These concepts have been developed with reference to technical literature from various companies with one company interested in taking it further Providing a novel and up to date design concept this book is of value to practitioners and researchers

looking to improve the standard of mass housing in the UK It is also of interest to anyone wishing to build their own house and to manufacturers wanting to move into modern housing technology

The Connected Home: The Future of Domestic Life Richard Harper, 2011-12-08 The title of this new book The Connected Home reflects the move away from the idea that smart homes would alter the lives of those living in them by providing technologies to take over tasks that were previously the responsibility of the householder such as managing entertainment education and even eating Up until around 10 years ago this view was commonplace but time has shown that the technologies to support a smart home have not developed in such a way as to support this premise Instead what people do in their homes has moved the concept of a smart home into that of the connected home The rise of on line games technologies video connections via Skype social networking internet browsing etc are now an integral part of the home environment and have had a significant effect on the home The contributors to this exciting new book consider and discuss the effects and ramifications of the connected home from a variety of viewpoints an examination of the take up of personal computers and the Internet in domestic situations an analysis of the changing intersection of technology and human habits in the connected home the impact of gaming texting e book readers tablets and other devices and their effect on the social conditions of a household the relationship between digital messaging applications and real geography and an overview of how sensing technologies for the smart home might evolve lightweight medical technologies for example The book culminates by addressing unfinished ambitions from the smart home agenda the factors that have prevented their realisation and addresses the need for extending research into the area

Environment Albena Yaneva, Alejandro Zaera-Polo, 2017-05-15 The scale of ecological crises made us realize that every kind of politics has always been cosmopolitics politics of a cosmos Cosmos embraces everything including the multifarious natural and material entities that make humans act The book examines cosmopolitics in its relation to design practice Abandoning the modernist idea of nature as being external to the human experience a nature that can be mastered by engineers and scientists from outside the cosmopolitical thinking offers designers to embark in an active process of manipulating and reworking nature from within To engage in cosmopolitics this book argues means to redesign create instigate and compose every single feature of our common experience In the light of this new understanding of nature we set the questions What is the role of design if nature is no longer salient enough to provide a background for human activities How can we foster designers own force and make present what causes designers to think feel and act How do designers make explicit the connection of humans to a variety of entities with different ontology rivers species particles materials and forces How do they redefine political order by bringing together stars prions and people In effect how should we understand design practice in its relation to the material and the living world In this volume anthropologists science studies scholars political scientists and

sociologists rethink together the meaning of cosmopolitics for design At the same time designers architects and artists engage with the cosmopolitical question in trying to imagine the future of architectural and urban design The book contains original empirical chapters and a number of revealing interviews with artists and designers whose practices set examples of cosmopolitically correct design

Sustainable Homes James Grayson Trulove,2004-03-30 Sustainable Homes puts to rest the stigma that green architecture is unattractive and unsuitable for residential architecture For the houses shown in this volume represent design equal to or superior to most conventional houses Each of these eco houses is unique Some tread lightly on the site by nestling into the land Others are designed to be extremely well suited to the climactic zones in which they are built Many use materials that do no harm to the environment materials that are recycled salvaged or harvested The houses featured in Sustainable Homes are designed by today s top architects such as Obie Bowman Fernau and Hartman Hanrahan and Meyers and Lake Flato They reveal how much the parameters of ecological design have expanded in just a few short years Over two dozen individual houses are featured from locations as diverse as a Canadian cove to the Arizona desert from Kansas plains to the Norwegian coast from California bluffs to South Carolina wetlands each described through descriptions photographs plans drawings and schematics
