Environmental Change in Mountains and Uplands Martin Beniston,2016-05-06 Mountain environments are often perceived to be austere isolated and inhospitable. In fact these areas are of immense value to mankind providing direct life support to close to 10 percent of the world s population and sustaining a wide variety of species many of which are endemic to this environment. Environmental Change in Mountains and Uplands provides detailed account of the fragile and marginal physical and socio economic systems which make up the world s mountain regions. Discussing the direct and indirect impacts of human interference on

environmental ecosystems it then turns to the social and economic consequences of such environmental change both upon the mountain environment itself and upon the populations who depend on mountain resources for their economic sustenance This book includes a review of possible implications for adaption and mitigation strategies in a global context Working within a broad temporal scale it draws upon paleoenvironmental records to document past changes which have occurred in the absence of major anthropogenic influences as well as utilising modelling as a means to assessing future environmental change
