

A close-up, slightly low-angle shot of a silver, mesh-covered microphone. The microphone is the central focus, with its handle extending downwards and to the left. The background is heavily blurred, showing the silhouettes and heads of an audience seated in rows, suggesting a lecture hall or conference setting. The lighting is warm and soft, coming from the upper left, creating a bokeh effect with out-of-focus light spots.

The Athenaeum ,1859 **Understanding Earth's Deep Past**
National Research Council,Division on Earth and Life Studies,Board on Earth Sciences and Resources,Committee on the

Importance of Deep-Time Geologic Records for Understanding Climate Change Impacts, 2011-08-02 There is little dispute within the scientific community that humans are changing Earth's climate on a decadal to century time scale. By the end of this century without a reduction in emissions atmospheric CO₂ is projected to increase to levels that Earth has not experienced for more than 30 million years. As greenhouse gas emissions propel Earth toward a warmer climate state an improved understanding of climate dynamics in warm environments is needed to inform public policy decisions. In *Understanding Earth's Deep Past* the National Research Council reports that rocks and sediments that are millions of years old hold clues to how the Earth's future climate would respond in an environment with high levels of atmospheric greenhouse gases. *Understanding Earth's Deep Past* provides an assessment of both the demonstrated and underdeveloped potential of the deep time geologic record to inform us about the dynamics of the global climate system. The report describes past climate changes and discusses potential impacts of high levels of atmospheric greenhouse gases on regional climates, water resources, marine and terrestrial ecosystems, and the cycling of life-sustaining elements. While revealing gaps in scientific knowledge of past climate states, the report highlights a range of high-priority research issues with potential for major advances in the scientific understanding of climate processes. This proposed integrated deep time climate research program would study how climate responded over Earth's different climate states, examine how climate responds to increased atmospheric carbon dioxide and other greenhouse gases, and clarify the processes that lead to anomalously warm polar and tropical regions and the impact on marine and terrestrial life. In addition to outlining a research agenda, *Understanding Earth's Deep Past* proposes an implementation strategy that will be an invaluable resource to decision makers in the field as well as the research community, advocacy organizations, government agencies, and college professors and students.

Engaging Anthropological Theory Mark Moberg, 2024-09-30 The updated third edition of this book critically reconsiders the history of anthropological theory. Covering key concepts and theorists in a lively style, *Engaging Anthropological Theory* examines the historical context of anthropological ideas and the contested nature of anthropology itself. The book illustrates how anthropological ideas about human diversity are rooted in historical conditions, including the West's relationship with colonized societies and the politics of scholarly inquiry itself. Exploring anthropological ideas in context helps students understand how they evolved and how they relate to society and history. This new edition pays close attention to non-canonical figures and scholars of color whose contributions are too often bypassed in disciplinary histories. Students and instructors will also appreciate the open-ended review questions for each chapter that stimulate critical thought and discussion. Extensively illustrated throughout, this

engaging text moves away from the dry recitation of past viewpoints in anthropology and shows their continued relevance to modern life **Books in Print** ,1977 *Athenaeum and London Literary Chronicle* ,1859 **Athenaeum and Literary Chronicle** ,1859 Higher Education and National Affairs ,1997 *Museums, Children and Social Action* Sharon E. Shaffer,2023-12-15 *Museums Children and Social Action* examines the role that museums play in reaching teaching and inspiring children as global citizens of the world and looking to the future argues that the sustainability of museums will come from strengthening relationships with young visitors Presenting a diverse range of programs exhibitions and outreach from museums across five continents Shaffer highlights how museums are already serving children and making a difference in their lives Arguing that museums have a unique responsibility to connect this audience with relevant social issues and challenges such as social injustice racism climate change and poverty Shaffer simultaneously acknowledges that a large number of children are still on the margins of the institution and its mission Recognizing the ways in which museums are currently serving children the book also considers what museums could and should be doing as they plan for the future raising critical questions about core values community partners and social agendas *Museums Children and Social Action* is essential reading for academics and students engaged in the study of museums social justice and childhood It encourages museums to make it their mission to educate and serve this audience and their families for the good of children as well as museums while also considering what their institutions can do to make a lasting impact on children and their families
