How The Earth Turned Green A Brief 3 8 Billion Year History Of Plants:

How the Earth Turned Green Joseph E. Armstrong, 2020-03-04 This amazing and wonderful book explores the evolutionary history of photosynthesis in a grand story of how the world became the verdant place we know. Choice On this blue planet long before dinosaurs reigned tiny green organisms populated the ancient oceans. Fossil and phylogenetic evidence suggests that chlorophyll the green pigment responsible for coloring these organisms has been in existence for some 85% of Earth's long history that is for roughly 3.5 billion years. In How the Earth Turned Green Joseph E. Armstrong traces the history of these verdant organisms which many would call plants from their ancient beginnings to the diversity of green life that inhabits the Earth today. Using an evolutionary framework How the Earth Turned Green addresses questions such as Should all green organisms be considered plants? Why do these organisms look the way they do? How are they related to one another and to other chlorophyll free organisms? How do they reproduce? How have they changed and diversified over time? And how has the presence of green organisms changed the Earth's ecosystems? With engaging prose and astonishing breadth as well as informative diagrams and illustrations How the Earth Turned Green demonstrates how the Earth blossomed into such an incredible world that most of us simply take for granted. The Life of Plants Emanuele Coccia, 2018-12-05 We barely talk about them and seldom know their names Philosophy has always overlooked them even biology considers them as mere decoration on the tree of life And yet plants give life to the Earth they produce the atmosphere that surrounds us they are the origin of the oxygen that animates us Plants embody the most direct elementary connection that life can establish with the world In this highly original book Emanuele Coccia argues that as the very creator of atmosphere plants occupy the fundamental position from which we should analyze all elements of life From this standpoint we can no longer perceive the world as a simple collection of objects or as a universal space containing all things but as the site of a veritable metaphysical mixture Since our atmosphere is rendered possible through plants alone life only perpetuates itself through the very circle of consumption undertaken by plants In other words life exists only insofar as it consumes other life removing any moral or ethical considerations from the equation In contrast to trends of thought that discuss nature and the cosmos in general terms Coccia's account brings the infinitely small together with the infinitely big offering a radical redefinition of the place of humanity within the realm of life
