*Modeling of Metal Forming and Machining Processes* Prakash Mahadeo Dixit, U.S. Dixit, 2008-05-14 The use of computational techniques is increasing day by day in the manufacturing sector. Process modeling and optimization with the help of computers can reduce expensive and time-consuming experiments for manufacturing good quality products. Metal forming and machining are two prominent manufacturing processes. Both of these processes involve large deformation of elasto plastic materials due to applied loads. In metal forming the material is plastically deformed without causing fracture. On the other hand in machining the material is deformed till fracture in order to remove material in the form of chips. To understand the physics of metal forming and machining processes one needs to understand the kinematics of large deformation, dependence of deformation and its rate on displacement as well as the constitutive behavior of elasto plastic materials, dependence of internal forces on deformation and its rate. Once the physics is understood these phenomena have to be converted to mathematical relations in the form of differential equations. The interaction of the work piece with the tools, dies and other surroundings also needs to be expressed in a mathematical form known as the boundary and initial conditions. In this book the first four chapters essentially discuss the physics of metal forming and machining processes. The physical behavior of the work piece during the processes is modeled in the form of differential equations and boundary and initial conditions. **Elements of Workshop Technology. Vol. I** S K. **Elements Of Workshop Technology Volume - 1** Choudhury S K, 1986 **Elements of Workshop Technology** Samir Kumar Hajra Choudhury, S. C. Bhattacharya, 1971 A Textbook of Workshop Technology RS Khurmi | JK Gupta, 2008 A Textbook of workshop Technology Manufacturing Processes to the students of degree and diploma of all the Indian and foreign universities. The object of this book is to present the subject matter in a most concise, compact, to the point and lucid manner. While writing the book we have constantly kept in mind the various requirements of the students. No effort has been spared to enrich the book with simple language and self explanatory diagrams. Every care has been taken not to make the book voluminous as the students have also to face other subjects of equal importance. *Workshop Technology* Ravindra Prakash Kiran, Workshop Technology has been written to give an introduction of various workshop and manufacturing technologies and processes to students of degree and diploma engineering. The book has been written in a logical sequence so that the students can move on to complex manufacturing processes after acquiring knowledge about the basics of processes and materials. This will prove to be an ideal textbook for them to face the term end practical and theory tests with confidence. It is advised that the students should go through the relevant chapters before they start out in workshop or attend a theory lecture on these KEY FEATURES: Concise presentation of practices in various mechanical shops. Plenty of diagrams to describe every process and tools. Large number of chapter end review questions. All recent techniques have been covered.
