**A Study on New Approaches in Coherent X-ray Microscopy of Biological Specimens** Klaus Giewekemeyer, 2011 The use of coherent x rays for microscopic imaging has seen a rapid and ongoing development within the past decade driven by an increasing availability of highly brilliant and coherent sources worldwide Accordingly novel methods have been developed which replace the microscope's objective lens by a numerical reconstruction scheme The aim of the present work is to study how very recent experimental and algorithmic developments in the field can be implemented towards a highly sensitive and fully quantitative microscopy method for imaging of biological cells To this end different experimental approaches are studied based on coherent far field as well as near field diffraction At first an application of the novel ptychographic imaging method to single biological cells is presented In particular it is demonstrated how weakly scattering biological specimens can be imaged with fully quantitative density contrast Alongside a successful extension of the method towards soft x ray energies is described In the second part of the work it is shown how x ray waveguides can be used as a point source for propagation based microscopy of single cells in the hard x ray regime The specifically devised iterative reconstruction scheme allows for full quantitativity and high sensitivity and thus enables an application to single biological cells The work contains a thorough introduction into the x ray optical methods applied and aims at a useful and self contained overview on aspects of signal and Fourier theory relevant for the used numerical propagation schemes

**Grundlagen der Photonik** Bahaa E. A. Saleh, Malvin Carl Teich, 2008-05-05. Schon die erste Auflage des englischen Lehrbuchs Fundamentals of Photonics zeichnete sich durch seine ausgewogene Mischung von Theorie und Praxis aus und deckte in detaillierter Darstellung die grundlegenden Theorien des Lichts ab. Es umfasste sowohl die Themen Strahlenoptik, Wellenoptik, elektromagnetische Optik, Photonenoptik sowie die Wechselwirkung von Licht und Materie, als auch die Theorie der optischen Eigenschaften von Halbleitern. Die Photonik Technologie hat eine rasante Entwicklung genommen, seit der Publikation der ersten Ausgabe von Fundamentals of Photonics vor 15 Jahren. Die nun vorliegende Zweite Auflage des Marksteins auf dem Gebiet der Photonik tragt mit zwei neuen und zusatzlichen Kapiteln den neuesten technologischen Fortschritten Rechnung: Photonische Kristalle sowie Ultrakurzpuls Optik. Zudem wurden alle Kapitel grundlich bearbeitet und viele Abschnitte hinzugefugt, so z.B. ber Laguerre-Gauss-Strahlen, die Sellmeier-Gleichung, Photonenkristall-Wellenleiter, photonische Kristallfasern, Mikrospheren, Resonatoren, Optische Kohrenz, Tomographie, Bahndrehimpuls des Photons, Bohrsche Theorie, Raman-Verstarker, rauscharme Avalanche-Photodioden, Abstimmkurven und Dispersions-Management.

**Classical and Evolutionary Algorithms in the Optimization of Optical Systems** Darko Vasiljevic, 2012-12-06. The optimization of optical systems is a very old problem. As soon as lens designers discovered the possibility of designing optical systems, the desire to improve those systems by the means of optimization began. For a long time, the optimization of optical systems was connected with well known mathematical theories of optimization, which gave good results but required lens designers to have a strong knowledge about optimized optical systems. In recent years, modern optimization methods have been developed that are not primarily based on the known mathematical theories of optimization but rather on analogies with nature. While searching for successful optimization methods, scientists noticed that the method of organic evolution, well known Darwinian theory of evolution, represented an optimal strategy of adaptation of living organisms to their changing environment. If the method of organic evolution was very

successful in nature the principles of the biological evolution could be applied to the problem of optimization of complex technical systems
