Handbook Of Regional Innovation And Growth Handbook Of Regional Innovation And Growth:

Handbook of Regional Innovation and Growth Philip Cooke, Bjørn Asheim, Ron Boschma, Ron Martin, Dafna Schwartz, Franz Tötting, 2011-01-01 Today economic growth is widely understood to be conditioned by productivity increases which are in turn profoundly affected by innovation This volume explores these key relationships between innovation and growth bringing together experts from both fields to compile a unique Handbook The Handbook considers innovation from fresh perspectives encompassing topics such as services innovation inward investment and innovation creative industry innovation and green innovation It is divided into seven sections dealing with regional innovation and growth theory dynamics evolution agglomeration innovation worlds innovation system institutions and innovation governance and policy This definitive compendium on regional innovation and growth will undoubtedly appeal to teachers students researchers and practitioners of innovation and growth dynamics worldwide *Handbook of Regional Innovation and Growth*, 2011 **Handbook of Regions and Competitiveness** Robert Huggins, Piers Thompson, 2017-03-31 The aim of this Handbook is to take stock of regional competitiveness and complementary concepts as a means of presenting a state of the art discussion of the contemporary theories perspectives and empirical explanations that help make sense of the determinants of uneven development across regions Drawing on an international field of leading scholars the book is assembled and organized so that readers can first learn about the theoretical underpinnings of regional competitiveness and development theory before moving on to deeper discussions of key factors and principal elements the emergence of allied concepts empirical applications and the policy context **Regional Innovation Strategies 3 (RIS3)** Roberta Capello, Henning Kroll, 2018-12-07 With regions and nations having formally fulfilled the ex ante conditionality this book provides a first overall review of RIS3 policy processes aiming to assess the consistency of the concept of smart specialization from an applied policy oriented perspective Moving from the theory of design to the practice of implementation the reflections and case studies in this volume reveal strengths and weaknesses in the way concrete strategies have been conceived and implemented enabling reflections on the future of the concept in a more general sense In many cases smart specialization strategies turn out to be new variants of regional development policies embracing the importance of a place based approach However the approach's potential to add distinctive value will stem from its capacity to turn innovation and knowledge into tools for local development by harnessing them for wider territorial development goals By helping regions to identify and leverage untapped resources through new processes smart specialization based policies may help to reconcile cohesion and competitiveness objective Consequently new approaches appear most promising where institutional administrative and political conditions allow the setup of genuinely new processes and where their focus is on territorial assets in a comprehensive manner rather than mere industrial renewal This book was originally published as a special issue of European Planning Studies The Empirical and Institutional Dimensions of Smart Specialisation Philip McCann, Frank van Oort, John

Goddard,2016-11-25 Smart specialisation is the new policy approach to the development of regional innovation systems across Europe and it involves fostering innovative and entrepreneurial initiatives which are well tailored to the local context The different technologies skills profiles business activities institutions and sectors which reflect a region s economic strengths and potential are to be fostered and encouraged to diversify in ways which also exploit the region s linkages with broader global value chains Yet the ideas contained in the smart specialisation agenda have until now been primarily conceptual in nature The Empirical and Institutional Dimensions of Smart Specialisation draws together some of the leading regional economists and scientists in Europe to analyse how smart specialisation is working in practice This book investigates different dimensions of the agenda as it is developing across parts of Europe from both quantitative and qualitative perspectives The quantitative analysis examines the nature of the diversification processes undertaken by regions and the interplay between the chosen local regional development priorities and the wider global value chain impacts of these choices Meanwhile the qualitative analysis examines the institutional opportunities and challenges facing policy makers and the key elements most likely to provide the underpinnings of a workable set of policy settings The book is aimed both at academic researchers interested in the interface between economic geography and regional innovation systems as well as at policy makers making public policy decisions related to regional development at the local city regional or national levels

The Palgrave Encyclopedia of Urban and Regional Futures Robert C. Brears,2023-01-13 While urban settlements are the drivers of the global economy and centres of learning culture and innovation and nations rely on competitive dynamic regions for their economic social and environmental objectives urban centres and regions face a myriad of challenges that impact the ways in which people live and work create wealth and interact and connect with places Rapid urbanisation is resulting in urban sprawl rising emissions urban poverty and high unemployment rates housing affordability issues lack of urban investment low urban financial and governance capacities rising inequality and urban crimes environmental degradation increasing vulnerability to natural disasters and so forth At the regional level low employment low wage growth scarce financial resources climate change waste and pollution and rising urban peri urban competition etc are impacting the ability of regions to meet socio economic development goals while protecting biodiversity The response to these challenges has typically been the application of inadequate or piecemeal solutions often as a result of fragmented decision making and competing priorities with numerous economic environmental and social consequences In response there is a growing movement towards viewing cities and regions as complex and sociotechnical in nature with people and communities interacting with one another and with objects such as roads buildings transport links etc within a range of urban and regional settings or contexts This comprehensive MRW will provide readers with expert interdisciplinary knowledge on how urban centres and regions in locations of varying climates lifestyles income levels and stages development are creating synergies and reducing trade offs in the development of resilient resource efficient environmentally friendly liveable socially

equitable integrated and technology enabled centres and regions Technopolis Deog-Seong Oh, Fred Phillips, 2013-12-13 Six years of UNESCO World Technopolis Association workshops held at various world cities and attended by government officials and scholars from nearly all the world's countries have resulted in a uniquely complete collection of reports on science park and science city projects in most of those countries. These reports, of which a selected few form chapters in this book, allow readers to compare knowledge based development strategies, practices and successes across countries. The chapters illustrate varying levels of cooperation across government, industry and academic sectors in the respective projects and the reasons and philosophies underlying this variation and resulting differences in practices and results.

Unlocking Regional Innovation and Entrepreneurship Irène Bernhard, Urban Gråsjö, Charlie Karlsson, 2021-06-25 Illuminating and timely this book explores several theoretical and empirical issues related to the potential for increasing capacities for innovation, knowledge and entrepreneurship. It highlights the current academic and political consensus that calls for policy interventions targeted towards more balanced, inclusive and regionally cohesive growth.

Path Dependence and Regional Economic Renewal Arne Isaksen, Stig-Erik Jakobsen, 2018-12-07 This book investigates the mechanisms that may stimulate or hamper the renewal of the regional industry structure. Recent years have witnessed a strong interest in and need for the modernization and upgrading of existing industries and the introduction of new industries. Informed by the evolutionary perspective, this book argues that innovations within existing industry paths and the creation of new industries are strongly rooted in the established economic practice. Historically developed skills, existing industrial structure and regional and extra regional networks form the basis for future regional growth. This volume consists of 11 chapters studying different aspects of regional industrial path development, illustrated with cases from Norway, Sweden and Spain. The book also looks into the role of policy for regional economic renewal and argues that economic renewal is fostered by policies that incorporate both actor based and system based elements. Such policy mix will provide a vital push towards renewal and new path development. The chapters were originally published as a special issue in *European Planning Studies*.

Regional Development and Proximity

Relations André Torre,Frédéric Wallet,2014-02-28 The notion of proximity is increasing in popularity in economic and geographic literature and is now commonly used by scholars in regional science and spatial economics Broadening Our Knowledge on Cluster Evolution Dirk Fornahl,Robert Hassink,Max-Peter Menzel,2018-02-02 Although clusters are regarded as important elements in economic development the strong focus in the literature on the way clusters function is contrasted with a disregard for their evolutionary development how clusters actually become clusters how and why they decline and how they shift into new fields and transform over time Although recently new cluster life cycle approaches emerged both empirical evidence and theoretical contributions on this topic are still limited This book therefore contributes to broadening our knowledge on the life cycle and evolution of clusters both empirically and theoretically It contains chapters on inter firm relations as drivers of cluster transformation as well as chapters on the heterogeneity of firms and firm capabilities during cluster evolution and on the role of institutions in stimulating the emergence and growth of clusters Case studies stem from different industries and technologies such as biogas film and television new media and medical technologies and from different countries such as Sweden Austria Switzerland and South Korea All chapters underline that cluster evolution does not only depend on internal dynamics but that external relations are an integral part of cluster dynamics This book was previously published as a special issue of European Planning Studies

Knowledge and Networks

Johannes Glückler,Emmanuel Lazega,Ingmar Hammer,2017-01-05 This book discusses a core question in many fields of the social sciences namely how to create share and adopt new knowledge It creates an original space for conversation between two lines of research that have developed largely in parallel for a long time social network theory and the geography of knowledge This book considers that relational thinking has become increasingly important for scholars to capture societal outcomes by studying social relations and networks whereas the role of place space and spatial scales has been somewhat neglected outside an emergent geography of knowledge The individual contributions help integrate network arguments of

connectivity geographical arguments of contiguity and contextuality into a more comprehensive understanding of the ways in which people and organizations are constrained by and make use of space and networks for learning and innovation Experts in the fields of geography sociology economics political science psychology management and organizational studies develop conceptual models and propose empirical research that illustrates the ways in which networks and geography play together in processes of innovation learning leadership and power This book is open access under a CC BY 4.0 license *Worldwide Knowledge?* Martina Fuchs, 2016-02-11 Putting forward a comprehensive view of knowledge with a specific perspective on place and space this book provides a new perspective on the globalisation of knowledge Crossing disciplinary boundaries the principal agenda of this volume is to open up a perspective beyond knowledge i.e. beyond the interpretation of knowledge as scientific technical knowledge Author Martina Fuchs introduces further kinds of knowledge and interpretation which influence managements perception of globalisation and therefore the knowledge which is going global She refers to knowledge in the sense of experiences competencies in the production and labour process as well as mutually shared mental constructs which are embedded in a context of understanding and interpretation Exploring beyond the meaning of worldwide knowledge as general open access knowledge this book also discusses barriers to knowledge problems of transfer and the influence of governance and control Knowledge Intensive Business Services and Regional Competitiveness João J. M. Ferreira, Mário L. Raposo, Cristina I. Fernandes, Marcus Dejardin, 2016-04-20 Research interest in the service sector has boomed in recent years as deindustrialisation became entrenched Instead of being regarded as merely supplementary to traditional industry and manufacturing services have generated progressively rising levels of growth in developed economies while at the same time coming to be recognised as major drivers of innovation Among the factors which have helped service companies notch up swifter growth rates than all other sectors are the outsourcing of such services by other sectors including the development of information and communication technologies and changes to the regulatory legal and market frameworks as well as globalisation and internationalisation The result is a cluster of highly innovative firms which can loosely be grouped under the heading of Knowledge Intensive Business Services KIBS Knowledge Intensive Business Services and Regional Competitiveness charts the development of these firms and explores their success through four mutually linked parts KIBS and industrial dynamics KIBS and their context KIBS and their contribution to regional competitiveness and economic development and finally KIBS and public policy This book is suitable for researchers and policy makers interested in the rise of these influential actors and their influence on regional competitiveness Evolutionary Economic Geography Dieter Kogler, 2017-10-02 Economic geographers increasingly consider the significance of history in shaping the contemporary socio economic landscape and increasingly believe that experiences and competencies acquired over time by individuals and entities in particular localities to a large degree determine present configurations as well as future regional trajectories Attempts to trace understand and investigate the pathways from past to present have given rise to the thriving

and exciting sub field of Evolutionary Economic Geography EEG EEG highlights the important factors that initiate inhibit or consolidate the contextual settings and relationships in which regions and their respective agents which comprise and shape economic activity and social reproduction change over time It has at its core the production and destruction of novelty in space and the links between innovation and regional economic fortunes The creation of knowledge its movement and recombination within different regional ensembles of economic agents and institutions plays a critical role in the evolution of the space economy EEG provides a framework to disentangle the complexity of technological change and regional economic development based on a variety of theoretical and methodological approaches In only a short time EEG has established itself as a promising and rapidly evolving research framework with its focus on the driving forces of regional development across various scales and its attempt to translate findings into public policy This book advances the theoretical foundations of EEG and demonstrates how EEG utilises and operationalises conceptual frameworks both established and new Contributions also point to future research avenues and extensions of EEG attempting to build stronger ties between theory empirical evidence and relevance to policy This book was originally published as a special issue of Regional Studies

Unfolding Cluster Evolution Fiorenza Belussi, Jose Luis Hervás-Oliver, 2016-08-05 Various theories have been put forward as to why business and industry develops in clusters and despite good work being carried out on path dependence and dynamics this is still very much an emerging topic in the social sciences To date no overarching theoretical framework has been developed to show how clusters evolve Unfolding Cluster Evolution aims to address this gap by presenting theoretical and empirical research on the geography of innovation This contributed volume seeks to shed light on the understanding of clusters and its dynamic evolution The book provides evidence to suggest that traditional perspectives from evolutionary economic geography need to be wedded to management thinking in order to reach this point Bringing together thinking from a range of disciplines and countries across Europe this book explores a wide range of topics from the capability approach to network dynamics to multinational corporations to firm entry and exit and social capital This book will be of interest to policy makers and students of urban studies economic geography and planning and development

Path Dependence and New Path Creation in Renewable Energy Technologies James Simmie, 2016-01-08 Why are old technologies persisted with after better alternatives have been invented This book examines this question a central concern of evolutionary economics specifically focusing on renewable energy technologies The concept of path dependence is used to analyse why and how technological development can become locked in to inefficient ways of doing things This book shows how lock in can be avoided by the creation of new technological pathways The chapters focus on the comparatively recent introduction of new wind turbine technologies for the generation of carbon free electricity This case study provides valuable lessons in understanding the issues confronting inventors attempting to commercialise their new ideas in the face of historically established conventional technologies It is also set within the critical debate on climate change and the need to de carbonise

energy supplies in order to stop further man made deterioration in the global environment This book was originally published as a special issue of European Planning Studies The Global Competitiveness of Regions Robert Huggins,Hiro Izushi,Daniel Prokop,Piers Thompson,2014-06-27 The aim of this book is to consider theoretically the notion of the global competitiveness of regions as well as giving attention as to how such competitiveness may be empirically measured With this in mind the book has three specific objectives first to place the concept of regional competitiveness within the context of regional economic development theory second to present a rationale and method for quantifying the global competitiveness of regions and third to undertake the most geographically widespread analysis of regional competitiveness differences across the globe With regard to the third goal the analysis incorporates more than 500 regions across Europe North and South America Asia Pacific the Middle East and the so called BRIC economies of Brazil Russia India and China The importance of the concept of competitiveness has increased rapidly in recent years with the issues surrounding it becoming at the same time more empirically refined and theoretically complex The focus on regions reflects the growing consensus that they are the primary spatial units that compete to attract investment and it is at the regional level that knowledge is circulated and transferred resulting in agglomerations or clusters of industrial and service sector enterprises This growing acknowledgement of the region s role as a key spatial unit of organisation has led to attention turning to competitiveness at a more regional level The book explores the results of the World Competitiveness Index of Regions WCIR covering the rankings and results of the 2014 edition The WCIR provides a tool for analysing the development of a range of regional economies across the globe It enables an illustration of the changing patterns of regional competitiveness on the international stage to be generated In fundamental terms the WCIR aims to produce an integrated and overall benchmark of the knowledge capacity capability and sustainability of each region and the extent to which this knowledge is translated into economic value and transferred into the wealth of the citizens of each region *Universities and Regional Economic Development* Paul Benneworth,2018-09-03 In a knowledge based economy universities are vital institutions This volume explores the roles that universities can play in peripheral regions contributing to processes of regional economic development and innovative growth Including a series of case studies drawn from Portugal Norway Finland the Czech Republic Estonia and the Dutch German border region this will be the first book to offer a comprehensive comparative overview of universities in European economically peripheral regions These studies seek to explore the tensions that arise in peripheral regions where there may not be obvious matches between university activities and regional strengths Aimed at academics policy makers and practitioners working on regional innovation strategies this volume brings a much needed sense of realism and ambition for all those concerned with building successful regional societies at the periphery of the knowledge economy
