European Communications Law and Technological Convergence Pablo Ibáñez Colomo, 2011-12-14 This book presents a thorough critical examination of the European regulatory reaction to technological convergence tracing the explicit and implicit mechanisms through which emerging concerns are incorporated into regulation and competition law and then goes on to identify the patterns that underlie these responses so as to establish the extent to which the issues at stake and the implications of intervention are fully understood and considered by authorities Focusing on conflict points areas of tension inevitably arising among overlapping regimes the analysis covers such elements as the following the provision of multiple play services the advent of convergent devices the interchangeability of transmission networks subscription based pay television services the diversification of television services such as on demand and niche theme channels the relative scarcity of premium content the migration of television content with cultural and social relevance to pay television and the emergence of bottleneck segments in the communications value chain Endorsing the adjustment of existing rules to meet pluralist objectives the author outlines a single coherent regulatory approach He shows how a careful analysis of the implications of technological convergence helps to solve conflicts between regimes Specifically the analysis addresses the level national or EU at which particular regulatory responses should emerge the objectives guiding action and the tools through which these objectives may be pursued These conclusions command the attention of policymakers regulators and lawyers active in the ongoing
