**Attitudes of Women Related to the Routine Use of Ultrasonography in Pregnancy**, 1908 The routine use and growing dependence on sophisticated technology has continued to foster a medicalized approach to childbirth. Sonography or ultrasound is one of the most utilized forms of modern reproductive technology. When applied in obstetrics for specific clinical concerns sonography provides valuable diagnostic information however there is limited evidence to support improved

outcomes from the use of this technology as a routine prenatal screening test The purpose of this study was to ask pregnant women about their attitudes toward prenatal sonography A convenience sample of 20 women who had undergone a prenatal scan participated in a tape recorded interview Using a qualitative research method guided by a feminist framework five themes emerged from analysis of the narratives These themes were a In Anticipation b The Imaging Experience c The Importance of Knowing d The Next Time and e The Ethics of It All Key findings of this study suggest women a want prenatal sonography b are fostered to believe there is a need for this type of testing c feel a prenatal scan will provide reassurance about the progress of their pregnancy d feel an ultrasound is a routine prenatal test e do not view sonography as a method of prenatal diagnosis f want information on prenatal sonography to read prior to a scan and g believe ultrasound to be safe technology These findings are felt to result from the conceptualization of need routinization of testing and the therapeutic imperative all of which contribute further to the medicalization of childbirth Implications for health care practice and recommendations for further research have been suggested on the basis of these findings Hopefully this information may assist policy makers in designing women sensitive health care practice      *Outtakes from the Grave* Jeaniene Frost,2015-12-08
