Chon, Friedrich Recknagel, 2009-01-30 The book gives a comprehensive overview of all available types of ecological models It is the first book of its kind that gives an overview of different model types and will be of interest to all those involved in ecological and environmental modelling and ecological informatics

Handbook of Ecological Models used in Ecosystem and Environmental Management Sven Erik Jørgensen, 2016-04-19 It is estimated that roughly 1000 new ecological and environmental models join the ranks of the scientific literature each year The international peer reviewed literature reports some 20 000 new models spanning the period from 1970 2010 Just to keep abreast of the field it is necessary to design a handbook of models that doesn't merely list them

Ecological Modelling Sven Erik Jørgensen, 2009-09-10 Addressing the basic concepts of ecological modelling Jørgensen provides the user with a tool which can assist in the understanding of what various model types network calculations can do as well as outlining when to use which type as a tool to solve a specific problem

Ecological Modelling and Engineering of Lakes and Wetlands, 2014-04-04 Ecological modelling has developed rapidly in recent decades with the focus primarily on the restoration of lakes and wetlands Ecological Modelling and Engineering in Lakes and Wetlands presents the progress being made in modelling for a wealth of applications It covers the older biogeochemical models still in use today structurally dynamic models 3D models biophysical models entire watershed models and ecotoxicological models as well as the expansion of modeling to the Arctic and Antarctic climate zones The book also addresses modelling the effect of climate change including the development of ecological models for addressing storm water pond issues which are increasingly important in urban regions where more concentrated rainfalls are a consequence of climate change The ecological engineering topics covered in the book also emphasize the advancements being made in applying ecological engineering regimes for better environmental management of lakes and wetlands Examines recent progress towards a better understanding of these two important ecosystems Presents new results and approaches that can be used to develop better models Discusses how to increase the synergistic effect between ecosystems engineering and modelling

Advanced Modelling Techniques Studying Global Changes in Environmental Sciences, 2015-10-08 Advanced Modelling Techniques Studying Global Changes in Environmental Sciences discusses the need for immediate and effective action guided by a scientific understanding of ecosystem function to alleviate current pressures on the environment Research especially in Ecological Modeling is crucial to support the sustainable development paradigm in which the economy society and the environment are integrated and positively reinforce each other Content from this book is drawn from the 2013 conference of the International Society for Ecological Modeling ISEM an important and active research community contributing to this arena Some progress towards gaining a better understanding of the processes of global change has been achieved but much more is needed This conference provides a forum to present current research using models to investigate actions towards mitigating and adapting to change Presents state of the art modeling techniques Drawn from the 2013 conference of the International Society for Ecological Modeling ISEM an important and

active research community contributing to this arena Integrates knowledge of advanced modeling techniques in ecological and environmental sciences Describes new applications for sustainability **Social Computing, Behavioral-Cultural Modeling and Prediction** John Salerno, Shanchieh Jay Yang, Dana Nau, Sun-Ki Chai, 2011-02-21 This book constitutes the refereed proceedings of the 4th International Conference on Social Computing Behavioral Cultural Modeling and Prediction held in College Park MD USA March 29 31 2011 The 48 papers and 3 keynotes presented in this volume were carefully reviewed and selected from 88 submissions The papers cover a wide range of topics including social network analysis modeling machine learning and data mining social behaviors public health cultural aspects and effects and search

Introduction to Systems Ecology Sven Jorgensen, 2016-04-19 Possibly the first textbook to present a practically applicable ecosystems theory *Introduction to Systems Ecology* helps readers understand how ecosystems work and how they react to disturbances It demonstrates with many examples and illustrations how to apply the theory to explain observations and to make quantitative calculations and predictions **Lake Sustainability** C.A. Brebbia, S.E. Jorgensen, 2012-09-30 This book contains extended versions of papers presented at the 1st International Conference on Lake Sustainability held at the Wessex Institute of Technology WIT campus in the New Forest The meeting is a natural link in the chain of sustainability conferences that WIT regularly arranges A wide spectrum of contributions focusing on lake sustainability and many up to date aspects of lake management and limnology are covered by the fifteen papers selected for publication The papers draw an excellent picture of the recent developments in lake modelling limnology of lakes and lake management Readers will find useful the sustainability image of lakes presented in this volume *Surface Modeling* Tian-Xiang Yue, 2011-02-04 Although GIS provides powerful functionality for spatial analysis data overlay and storage these spatially oriented systems lack the ability to represent temporal dynamics which is a major impediment to its use in surface modeling However rapid development of computing technology in recent years has made real time spatial analysis and real time data visualization become realizable Based on newly developed methods *Surface Modeling High Accuracy and High Speed Methods* explores solutions to big error and slow efficiency problems two critical challenges that have long plagued those working in with geographical information system GIS and computer aided design CAD By developing high accuracy and high speed methods for surface modeling the book builds a bridge between the mathematical oriented theory of surface modeling and the user oriented application where the user is actually able to retrieve information on the method itself The author examines a novel method of high accuracy surface modeling HASM in terms of the fundamental theorem of surfaces He then analyzes the coefficient matrix and develops an adaptive method of HASM HASM AM a multi grade method of HASM HASM MG and an adjustment method of HASM HASM AD He uses numerical tests and real world studies to demonstrate that HASM AM HASM MG and HASM AD have highly accelerated computational speed especially for simulations with huge computational work Building on this the book discusses a HASM based method for dynamic simulation HASM FDS and then applies HASM methods to simulate

terrains climate change ecosystem change land cover and soil properties It demonstrates HASM s potential for simulating population distribution human carrying capacity ecosystem services ecological diversity change detection and wind velocity The book concludes with a discussion of the problems that exist in surface modeling on a global level and evaluates possible solutions to these problems
