Craighead, Charles B. Nemeroff, 2001 Encyclopedia From Super Recognisers to the Face Blind, 2025-10-16 There is a long history of face recognition research in psychology Typically performance is averaged across individuals to investigate the effect of factors like age or sex on face recognition performance However over the last 15 years or so research has started to consider how and why some people are better at recognising faces than others Some individuals possess an exceptional ability to recognise faces known as super recognisers while others struggle significantly to recognise the people around them a condition known as prosopagnosia or face blindness These differences may be attributed to a combination of genetic neurological socioemotional and environmental factors Understanding these individual differences is crucial in fields such as psychology neuroscience and security as it helps tailor possible approaches to enhance face recognition skills and in the future develop supportive technologies for those who struggle with it From Super Recognisers to the Face Blind provides readers with a wide ranging detailed and critical overview of individual differences in face recognition ability It provides

insights into why some people are better at recognising faces than others and the possible consequences of these differences carefully detailing the scientific knowledge on this emerging topic      **Scottish Criminal Evidence Law** Peter Duff, 2018-12-31 Why did Enlightenment happen in Edinburgh      **The Oxford Handbook of Cognitive Psychology** Daniel Reisberg, 2013-04-04 This handbook is an essential comprehensive resource for students and academics interested in topics in cognitive psychology including perceptual issues attention memory knowledge representation language emotional influences judgment problem solving and the study of individual differences in cognition      [The Science of Perception and Memory](#) Daniel Reisberg, 2014 A robbery victim tries to remember how the crime unfolded and who was present at the scene A medical patient recalls the doctor saying that the pain in her side wasn't worrisome and now that the tumor is much larger she's suing An investigation of insider trading hinges on someone's memory of exactly what was said at a particular business meeting In these and countless other examples our ability to remember our experiences is crucial for the justice system The problem though is that perception and memory are fallible How often do our eyes or memories deceive us Is there some way to avoid these errors Can we specify the circumstances in which perceptual or memory errors are more or less likely to occur Professor Daniel Reisberg tackles these questions by drawing on the available science and his personal experience training attorneys He provides detailed pragmatic advice that will prove helpful to law enforcement prosecutors defenders and anyone else who hopes to maximize the quality of the evidence available to the courts whether the evidence is coming from witnesses victims or defendants This book is carefully rooted in research but written in a way that will make it fully accessible to non scientists working in the justice system Early chapters provide an overview of the relevant science and a broad portrait of how perception and memory function Later chapters offer practical solutions for navigating situations involving eyewitness identifications remembered conversations evidence obtained from interviews with children confession evidence and the risks of false confession      [The Handbook of Attitudes, Volume 1: Basic Principles](#) Dolores Albarracín, Blair T. Johnson, 2018-10-10 Attitudes are evaluations of people places things and ideas They help us to navigate through a complex world They provide guidance for decisions about which products to buy how to travel to work or where to go on vacation They color our perceptions of others Carefully crafted interventions can change attitudes and behavior Yet attitudes beliefs and behavior are often formed and changed in casual social exchanges The mere perception that other people favor something say rich people may be sufficient to make another person favor it People's own actions also influence their attitudes such that they adjust to be more supportive of the actions People's belief systems even change to align with and support their preferences which at its extreme is a form of denial for which people lack awareness These two volumes provide authoritative critical surveys of theory and research about attitudes beliefs persuasion and behavior from key authors in these areas The first volume covers theoretical notions about attitudes the beliefs and behaviors to which they are linked and the degree to which they are held outside of awareness It also discusses motivational and cultural determinants of

attitudes influences of attitudes on behavior and communication and persuasion The second volume covers applications to measurement behavior prediction and interventions in the areas of cancer HIV substance use diet and exercise as well as in politics intergroup relations aggression migrations advertising accounting education and the environment
