Handbook Of Ferroalloys Chapter 7 Manganese Ferroalloys Technology:

Handbook of Ferroalloys Merete Tangstad, 2013-05-04 This chapter examines the theory and technology applied for the production of manganese ferroalloys. The focus is on smelting of ferromanganese, silicomanganese and manganese metal in electric furnaces with different process types. The properties of manganese as well as its major compounds, minerals and ores are presented. Agglomeration methods used to prepare ores for smelting are described. Refining techniques for low carbon manganese ferroalloys are discussed and postprocessing operations are outlined together with tapping and casting processes. Additionally, the energy balance of manganese alloys smelting is outlined and some potential hazards of the smelting technology are discussed together with their preventive actions.

Handbook of Ferroalloys Michael Gasik, 2013-05-04 This handbook gathers reviews and concisely presents the core principles and varied technology involved in processing ferroalloys. Background content in thermodynamics, kinetics, heat and mass transfer is accompanied by an overview of electrical furnaces, theory and practice as well as sustainability issues. The work includes detailed coverage of the major technologies of ferrosilicon, ferronickel, ferromolybdenum, ferrotungsten, ferrovanadium, ferromanganese and lesser known minor ferroalloys. Distilling the results of many years' experience in ferroalloys, Michael Gasik has assembled contributions from the world's foremost experts. The work is therefore a unique source for scientists, engineers and university students exploring in depth an area which is one of the most versatile and increasingly used fields within modern metallurgy. All in one source for the major ferroalloys and their metallurgical processing technologies, cutting research time otherwise spent digging through old handbooks or review articles. In depth discussion of the C-Si-Al reduction groups II-VIII of the periodic table supporting analysis of metallurgical processing. Contemporary coverage includes environment and energy saving issues.

Advances and Innovations in Ferronickel-Making Guanghui Li, Jun Luo, Mingjun Rao, Zhiwei Peng, Tao Jiang, 2023-01-18 This book introduces the most inspiring progress in the production of ferronickel from laterite ores from both theoretical and technological perspectives. Based on a detailed overview of nickel utilization from laterite ores, it provides the advances of four main methods for laterite ore processing, including the solid state reduction, magnetic separation process, the rotary kiln reduction, electric arc furnace smelting process, the Krupp-Renn process and the sintering blast furnace smelting process. Moreover, for mediating the adverse impacts of the byproducts in ferronickel and subsequent stainless steel making, it presents pioneering technologies of utilization of ferronickel slag for producing value added functional materials and recycling of stainless steel pickling sludge for ferronickel making. This book is expected to offer the audience a fascinating new insight into ferronickel making and related by-products valorization.

Advanced Methods and Technologies in Metallurgy in Russia Stavros Syngellakis, Jerome J Connor, 2017-12-22 The book provides a comprehensive overview of the most recent and advanced work on metallurgy sciences and technologies, including material characterization of complicated alloys, heat and surface treatment of ferrous metals, metallurgy and energy savings in pyrometallurgy in the important Ural

industrial region of Russia Until recently research into scientific and engineering problems within Russia developed along different lines than those in Europe and North America but nevertheless resulted in remarkable achievements utilizing different tools and methodologies than those used in the West Many of these achievements particularly in metallurgy were made in the Urals

Handbook of Ferroalloys Isobel Mc Dougall,2013-05-04 The process by which ore is converted to a ferroalloy contains a number of steps These include mining of the ore preparing the ore by processes such as crushing screening washing grinding or milling and sometimes applying beneficiation processes such as flotation followed by smelting and refining This chapter describes the equipment used for the smelting of ferroalloys The first section covers furnace technology and operation by discussing AC and DC furnaces their electrical operation electrodes and related plant such as raw material handling systems exhaust gas handling and furnace crucibles which includes the linings and cooling of the furnace and the roof The second section discusses the more important processing steps which may be applied to the raw materials at the smelter prior to their smelting in the furnace These include agglomeration by briquetting or the production of sintered pellets sintering of ore prereduction and preheating The third section describes the treatment of the product and slag after it leaves the furnace whereas the final section provides a short description of other furnaces for ferroalloys production

Handbook of Ferroalloys Lauri Holappa,2013-05-04 The word ferroalloy refers to an alloy of iron containing a significant proportion of one or more other elements like silicon manganese chromium aluminum or titanium The main applications of ferroalloys occur in the steelmaking process They are added to steel to improve properties like strength ductility and fatigue or corrosion resistance Additionally ferroalloys can have several other tasks such as in refining deoxidation modification and control of nonmetallic inclusions and precipitates The production and role of ferroalloys are briefly introduced both from a historical perspective and in light of current and future prospects Examples of production figures producers and markets are presented Recent developments and main drivers in ferroalloys processing including energy saving environmental issues primary and secondary raw materials resources and development trends in technology are briefly discussed
