It is generally considered that 40% of the dry matter collected overall ends up in a powder form. Moreover, nutritional dairy products presented in a dry form, e.g., infant milk formulae, have grown quickly over the last decade, now accounting for a large share of the profit of the sector. *Drying in the Dairy Industry: From Established Technologies to Advanced Innovations* deals with the market of dairy powders, issues considering both final product and process as well as their interrelationships. It explains the different processing steps for the production of dairy powders, including membrane homogenisation, concentration, and agglomeration processes. The book includes a presentation of the current technologies, the more recent development for each of them, and their impact on the quality of the final powders. Lastly, one section is dedicated to recent innovations and methods directed to more sustainable processes as well as latter developments at lab
