*A Handbook on Low-Energy Buildings and District-Energy Systems* L.D. Danny Harvey, 2012-08-21 Winner of Choice Magazine Outstanding Academic Titles for 2007 Buildings account for over one third of global energy use and associated greenhouse gas emissions worldwide Reducing energy use by buildings is therefore an

essential part of any strategy to reduce greenhouse gas emissions and thereby lessen the likelihood of potentially catastrophic climate change Bringing together a wealth of hard to obtain information on energy use and energy efficiency in buildings at a level which can be easily digested and applied Danny Harvey offers a comprehensive objective and critical sourcebook on low energy buildings Topics covered include thermal envelopes heating cooling heat pumps HVAC systems hot water lighting solar energy appliances and office equipment embodied energy buildings as systems and community integrated energy systems cogeneration district heating and district cooling The book includes exemplary buildings and techniques from North America Europe and Asia and combines a broad holistic perspective with technical detail in an accessible and insightful manner     *Insulation Materials, Testing and Applications, 2nd Volume* Ronald S. Graves, Donald C. Wysocki, 1991 Papers presented at the symposium of the same name held in Gatlinburg Tennessee October 1991 address issues connected with reflectives radiant barriers radiation control coatings economics and energy impact long term thermal performance of foams assessments and properties of foams convection     **The Cumulative Book Index** , 1989 A world list of books in the English language     Handbook of Water and Energy Management in Food Processing Jiri Klemes, Robin Smith, Jin-Kuk Kim, 2008-06-30 Effective water and energy use in food processing is essential not least for legislative compliance and cost reduction This major volume reviews techniques for improvements in the efficiency of water and energy use as well as wastewater treatment in the food industry Opening chapters provide an overview of key drivers for better management Part two is concerned with assessing water and energy consumption and designing strategies for their reduction These include auditing energy and water use and modelling and optimisation tools for water minimisation Part three reviews good housekeeping procedures measurement and process control and monitoring and intelligent support systems Part four discusses methods to minimise energy consumption Chapters focus on improvements in specific processes such as refrigeration drying and heat recovery Part five discusses water reuse and wastewater treatment in the food industry Chapters cover water recycling disinfection techniques aerobic and anaerobic systems for treatment of wastewater The final section concentrates on particular industry sectors including fresh meat and poultry cereals sugar soft drinks brewing and winemaking With its distinguished editors and international team of contributors Handbook of water and energy management in food processing is a standard reference for the food industry Provides an overview of key drivers for better management Reviews techniques for improvements in efficiency of water and energy use and waste water treatment Examines house keeping procedures and measurement and process control     **Thermal System Optimization** Vivek K. Patel, Vimal J. Savsani, Mohamed A. Tawhid, 2019-02-14 This book presents a wide ranging review of the latest research and development directions in thermal systems optimization using population based metaheuristic methods It helps readers to identify the best methods for their own systems providing details of mathematical models and algorithms suitable for implementation To reduce mathematical complexity the authors focus on optimization of individual components rather than

taking on systems as a whole They employ numerous case studies heat exchangers cooling towers power generators refrigeration systems and others The importance of these subsystems to real world situations from internal combustion to air conditioning is made clear The thermal systems under discussion are analysed using various metaheuristic techniques with comparative results for different systems The inclusion of detailed MATLAB codes in the text will assist readers researchers practitioners or students to assess these techniques for different real world systems Thermal System Optimization is a useful tool for thermal design researchers and engineers in academia and industry wishing to perform thermal system identification with properly optimized parameters It will be of interest for researchers practitioners and graduate students with backgrounds in mechanical chemical and power engineering *Handbook of Biofuels* Sanjay Sahay, 2021-10-31 Handbook of Biofuels looks at the many new developments in various type of bioenergy along with the significant constraints in their production and or applications Beyond introducing current approaches and possible future directions of research this title covers sources and processing of raw materials to downstream processing constraints involved and research approaches to address and overcome these needs Different combinations of products from the biorefinery are included along with the material to answer questions surrounding the optimum process conditions for conversion of different feedstocks to bioenergy the basis for choosing conversion technology and what bioenergy products make economic sense With chapters on the techno economic analysis of biofuel production and concepts and step by step approaches in bioenergy processing the objective of this book is to present a comprehensive and all encompassing reference about bioenergy to students teachers researchers and professionals Reviews all existing and emerging technologies surrounding the production of advanced biofuels including biodiesel and bioethanol Includes biofuel applications with compatible global application case studies Offers new pathways for converting biomass *American Book Publishing Record* ,1999 Plastics Product Design Engineering Handbook Sidney Levy, 2012-12-06 Plastics have become increasingly important in the products used in our society ranging from housing to packaging transportation business machines and especially in medicine and health products Designing plastic parts for this wide range of uses has become a major activity for designers architects engineers and others who are concerned with product development Because plastics are unique materials with a broad range of proper ties they are adaptable to a variety of uses The uniqueness of plastics stems from their physical characteristics which are as different from metals glasses and ceramics as these materials are different from each other One major concern is the design of structures to take loads Metals as well as the other materials are assumed to respond elastically and to recover completely their original shape after the load is removed Based on this simple fact extensive litera ture on applied mechanics of materials has been developed to enable designers to predict accurately the performance of structures under load Many engineers depend on such texts as Timoshenko s Strength of Materials as a guide to the performance of structures Using this as a guide generations of engineers have designed economical and safe structural parts Unfortunately these design

principles must be modified when designing with plastics since they do not respond elastically to stress and undergo permanent deformation with sustained loading
