*Current Trends in Monoclonal Antibody Development and Manufacturing* Steven J. Shire, Wayne Gombotz, Karoline Bechtold-Peters, James Andya, 2009-11-11 Monoclonal antibodies represent one of the fastest growing areas of new drug development within the pharmaceutical industry Several blockbuster products have been approved over the past several years including Rituxan Remicade Avastin Humira and Herceptin In addition over 300 new drugs are currently in clinical trials With both large established biotechnology companies and small start ups involved in the development of this important class of molecules monoclonal antibodies products will become increasingly prevalent over the next decade Recently the regulatory review of monoclonal antibodies has been moved from Center for Biologics and

Research to the Center for Drug Evaluation and Research CDER division of the US Food and Drug Administration It is anticipated that CDER will expect a certain minimal amount of data to be provided as more of these products move through the regulatory pipeline Current Trends in Monoclonal Antibody Development and Manufacturing will provide readers with an understanding of what is currently being done in the industry to develop manufacture and release monoclonal antibody products and what will be required for a successful regulatory submission

**Amino Acids in Nutrition and Health** Guoyao Wu, 2021-03-26 Amino acids AAs are not only building blocks of protein but are also signalling molecules as well as regulators of gene expression and the protein phosphorylation cascade Additionally AAs are key precursors for syntheses of hormones and low molecular weight nitrogenous substances with each having enormous biological importance For example physiological concentrations of AA metabolites e.g. nitric oxide polyamines glutathione taurine thyroid hormones and serotonin are required for cell functions Growing evidence shows that humans and animals have dietary requirements for all proteinogenic AAs Mammals birds and fish also have species and age dependent needs for some AA related substances However elevated levels of other products e.g. ammonia homocysteine H<sub>2</sub>S and asymmetric dimethylarginine are pathogenic factors for neurological disorders oxidative stress and cardiovascular disease Thus optimal amounts of AAs and their ratios in diets and circulation are crucial for whole body homeostasis and health Adequate provision of one or a mixture of functional AAs or metabolites may be beneficial for ameliorating health problems at various stages of the life cycle e.g. fetal growth restriction neonatal morbidity and mortality weaning associated intestinal dysfunction and wasting syndrome obesity diabetes cardiovascular disease the metabolic syndrome and infertility Dietary supplementation of these nutrients can also optimize the efficiency of metabolic transformations to enhance muscle growth milk production and athletic performance while preventing excess fat deposition and reducing adiposity Therefore functional AAs hold great promise in improving the growth health and well being of individuals Chapter 7 is available open access under a Creative Commons Attribution 4.0

**Reproduction in the Dog a Tropical Approach** Jovi R. Otite, 2015-10-30 Dog breeding has gained tremendous awareness over the last decade. In some countries it is a source of employment for many and a means of poverty alleviation. The canine industry is growing tremendously and dogs are transported across borders all year round. As a result of this fast growing industry, the treatment given to dogs keeps improving as man's awareness increases. However, majority of the literature available to dog breeders and enthusiasts are of temperate origin and as a result, information available to the tropical breeder is limited. Raising dogs in the tropics is different from the temperate regions. The outcome of inadequate information affects the management of our canine friends. This affects the reproductive potential of dogs raised in the tropics. The environment which we give our dogs reflects on the dog's ability to exhibit its full genetic makeup. Hence, dogs might appear sterile, obese, underweight, or malnourished depending on its environment. This book, *Reproduction in the Dog A Tropical Approach*, addresses the problems associated with dog breeding in the tropics and gives authentic information to the breeder, veterinarian, animal scientist, or dog enthusiast. It covers all the reader needs to know about breeding, reproduction, artificial insemination, semen collection, handling and storage, cloning, feed composition, housing, care of dogs, and lots more.
