digital age Page 4 of cover **Firepower in the Lab** N. Patel, C. Kumar, Tony J. Beugelsdijk, Scott P. Layne, 2001-07-01 Today's world poses a triple threat to the American population: infectious diseases, contamination of food and water, and bioattacks, biowarfare, or bioterrorism. At least 17 countries are producing weapons of mass destruction using viruses, bacteria, or their toxins. AIDS, E. coli, contamination, drug-resistant tuberculosis, and virulent flu strains are perhaps the best known of a host of disease threats. What these dangers have in common is the amount of data required to achieve solutions: in some cases as much as a petabit (1 followed by 15 zeros) of data is required to study large numbers of samples from widespread locations. **Firepower in the Lab** examines how the nation can combat this triple threat by improving our ability to detect, measure, and monitor harmful biological agents. It explores the potential of today's exciting new laboratory automation and computer technologies, as well as the emerging tools of molecular biology, how we can generate and analyze more data quickly, and reduce human hands-on involvement, which inevitably introduces errors. The book discusses how to improve and apply technologies such as robotics, laboratory automation, lab on a chip, bioinformatics, and Internet control innovations. It reviews lessons learned from our experience with pandemic flu viruses. It also presents strategies for developing new high-throughput technologies, including how to address the lack of public funding for critical research undertakings. **Food Protein Chemistry** Joe Regenstein, 2012-12-02 **Food Protein Chemistry: An Introduction for Food Scientists** discusses food proteins and how they are studied. Proteins are both biological entities and physicochemical compounds, and they will be examined in both contexts in this volume. The chemical and physical properties of proteins will be viewed from the perspective of chemists, despite the fact that their use in the food supply emphasizes their biological nature. Key topics discussed include proteins as essential to life, amino acids, protein classification, selected proteins of the most important food systems, and protein structure. The book also includes chapters on protein measurement, protein purification, and spectral techniques for the study of proteins. The book requires readers to have the equivalent of the Institute of Food Technologists' requirements for undergraduate food science majors. It also assumes a knowledge of math through calculus. While primarily intended for senior and first-year graduate food science students, the text may also be useful to researchers in allied fields. **Resources in Education**, 1996 **Assessment that Informs Practice**, 2000 **ENC Focus**, 2000 **Scientific and Technical Aerospace Reports**, 1988 Lists citations with abstracts for aerospace-related reports obtained from world-wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.
