has dealt with pharmacological treatment options and strategies for the major human sleep disorders associated with a panoply of symptomatic conditions. The present volume and its series of chapters individually focusing on a range of human conditions from pediatric sleep disorders to sleep related disorders of individuals suffering from Alzheimer's dementia uniquely cover the wide range of human medical conditions amenable to thoughtfully sleep related applied drug therapy. The Editors have brought together a superb group of internationally respected sleep clinicians and researchers that provide state of the art analysis of the current basic and clinical perspective regarding the most common sleep disorders that are amenable to pharmacological treatment. In each chapter the authors outline a thorough historical background of the particular disorder and review the basic pre-clinical studies leading to current treatment options.
