

Page

- C'est la séparation grâce à la différence de vitesse → mouvement antagoniste

Alors il nous faut des coefficient de distribution différents c.à.d [vitesse différente , affinité différente ...]

Cette technique ne concerne pas les formes solides, pour séparer les solides on doit les solubiliser.

- plus la substance a d'affinité pour la PS, plus elle est retardée , (si elle n'a aucune affinité pour la PS ça va sortir au même temps que le solvant = PM)
- On mesure l'absorbance de la molécule , et à chaque absorbance , le détecteur va donner Un signal (par la présence d'un chromophore) ,chaque signal correspond a un pic chromatographique et la somme des pics donne un chromatogramme . Bien que la PM traverse le détecteur on aura aucun signal (car elle n'absorbe pas dans le domaine qu'on utilise) et dès que la substance le traverse , on aura des signaux dont chacun d'entre eux correspond à une molécule.
- Pour les molécules qui ne sont pas séparées (qui ont même coefficient de partage par exemple) , ils donnent un pic pour chacune d'elles (exemple 3 pic pour 3 molécules non séparées et sortent au même temps) donc un signal correspond à 1 ou plusieurs molécules qui traverse(nt) le détecteur..... si quelqu'un a une explication il la partage avec nous svp

Abstract: The purpose of this study was to investigate the effect of a 12-week training program on the physical and psychological health of elderly people. The study was conducted in a community center in Tehran, Iran. The participants were 30 elderly people (15 men and 15 women) aged 65-75 years. They were divided into two groups: a control group and an experimental group. The experimental group participated in a 12-week training program consisting of aerobic, strength, and flexibility exercises. The control group did not participate in any training program. The results showed that the experimental group had significant improvements in physical and psychological health compared to the control group. The improvements were observed in the following variables: physical fitness, self-esteem, and life satisfaction. The findings of this study suggest that a 12-week training program can improve the physical and psychological health of elderly people.
