Pindborg, Mervyn Shear**

Histological Typing Of Odontogenic Tumours Histological Typing Of Odontogenic Tumours:

Histological Typing of Odontogenic Tumours, Jaw Cysts, and Allied Lesions Jens Jørgen Pindborg, Ivor Robert Horton Kramer, H. Torloni, 1971 Classifies and explains neoplasms and other tumours related to both the odontogenic apparatus and bone epithelial cysts and unclassified lesions

Histological Typing of Odontogenic Tumours Ivor Robert Horton Kramer, Jens Jørgen Pindborg, Mervyn Shear, 1992

Histological Typing of Odontogenic Tumours Ivor R.H. Kramer, J.J. Pindborg, M. Shear, 2013-04-17 Inter relationships of the Dental Tissues The tooth germ has three main components the enamel organ the dental papilla and the dental follicle Fig 1 The enamel organ is an epithelial structure derived from the ectoderm that lines much of the oral cavity The dental papilla and the dental follicle are ectomesenchymal mesectodermal being partly derived from cells that migrated from the neural crest early in embryogenesis Both the gross morphology of the tooth germ and the differentiation of its cells depend upon a complex pattern of inductive interactions between the epithelium and the ectomesenchyme The sites in which the teeth will form appear to be determined before the commencement of epithelial downgrowth from the oral epithelium to form the odontogenic epithelium This epithelial downgrowth the dental lamina the development of the enamel organs of the individual teeth and the morphology of each enamel organ are controlled by the ectomesenchyme The enamel organ is responsible for the formation of enamel and comprises four layers outer dental epithelium stellate reticulum stratum intermedium and inner dental epithelium Figs 1 and 2a

Application of the International Classification of Diseases to Dentistry and Stomatology World Health Organization, 1995 This third edition of the Application of the International Classification of Diseases to Dentistry and Stomatology ICD DA provides a coherent system for coding and classifying data on oral and dental disorders particularly when electronic or mechanical means of retrieval and analysis are used Scope of the classification includes all diseases and conditions that occur in have manifestations in or are associated with the oral cavity and adjacent structures ICD DA is derived from the Tenth Revision of the International Classification of Diseases ICD 10 and should be used in conjunction with this parent work For oral and dental disorders most of the classifications provided by ICD 10 have been subdivided and expanded to include a fifth character The purpose of this exclusive fifth character is to focus the attention of oral health personnel on the need for detailed diagnosis for each patient to allow standardized recording of all diagnoses and to facilitate comparison of data at an international level Like the parent work ICD DA has a detailed tabular section followed by a comprehensive alphabetic index The classification can be used in a contracted form consisting of a relatively small number of broad headings or in an expanded form that allows detailed analysis in areas of special interest ICD DA should prove valuable to a wide variety of users from governments collecting basic data to individual researchers practitioners and lecturers who require a convenient method for indexing their records and teaching material
