## **Histological Diagnosis Of Nevi And Melanoma:**

*Histological Diagnosis of Nevi and Melanoma* Guido Massi, Philip E. LeBoit, 2012-12-06 The interpretation of melanocytic tumors represents one of the most important topics and probably the most difficult challenge in the field of dermatopathology. For example, the evaluation of the so-called nevoid spitzoid melanoma, Spitz's nevi with conflicting criteria or some benign simulators of malignant melanoma can pose seemingly insurmountable diagnostic problems. A correct diagnosis is expected because the implications are serious. The misreading of a section of a malignant melanoma as a nevus which will then be left untreated may result in regrowth at the biopsy site, may metastasize and lead to death. Whereas overdiagnosis of Spitz's nevus may be followed by unnecessarily extensive surgery including lymph node dissection and sometimes immunotherapy and chemotherapy also. Melanocytic tumors are identified by clinical and histological criteria with the later based on both architectural and cytomorphological features. A clear comprehensive book on this subject can be of help to dermatopathologists, general pathologists and dermatologists. Philip LeBoit and Guido Massi are particularly suited to deal with this task because of their great experience. They have produced an impressive work that will be respected as a major teaching guide and diagnostic aid for melanoma and benign melanocytic lesions.
