Designing Gardens on Slopes Elizabeth Davies, Ruth Chivers, 2012-10-30 Designing real gardens on slopes for real people forms the central core of this book It demonstrates that making plans for gardens on slopes of all types really works Not only that they are a necessary part of the process of turning challenging sites into attractive gardens This is a really useful book that shows how good design helps to avoid costly common mistakes It is a simple and informative guide detailing from survey to construction and planting Not many gardens are completely flat Just one step in a garden makes a big difference adding more interest to the site But slopes do present more of a challenge when

designing gardens and definitely add to the expense of a building project A select portfolio of beautifully designed gardens shows projects from start to finish These are not simply attractive garden plans they actually work Not only does this book inspire it will show how to master hilly sites There are currently no books that deal specifically with this common problem in fact in many books designing gardens on slopes is barely mentioned Students of garden design qualified garden and landscape designers landscape builders and architects and owners of sloping gardens will therefore find this book particularly useful

Visualizing Landscape Architecture Elke Mertens, 2009-10-16 We don't sell gardens we sell images of gardens This observation on the part of a landscape architect makes it clear just how important it is that a design be effectively communicated to the community clients and the public Drawings models simulations and films communicate the designers proposed ideas and solutions but they also convey their attitude toward the use of nature and the environment With myriad possibilities including computer programs as well as hand drawings and models which continue to be widely used and strong competition in the field there is now a huge variety of visual representations with agreed upon rules but also a great deal of freedom In three large sections this book sifts through the currently commonplace and available techniques and evaluates them in terms of their informative value and persuasive power always illustrating its points with analysis of examples from international firms An introductory look at the development thus far is followed by a systematic presentation of modes of representation in two three and four dimensions in the plane in space and in the temporal process The second section deals with the sequence within the workflow from the initial sketch through concept and implementation planning all the way to the finished product The third section deals with the strategic use of visualizations in the context of competitions future schemes and large scale landscape planning The focus in this section is not on the familiar use of the relevant techniques but rather on the methods and forms of visual representation in contemporary landscape architecture
