Glossary of Morphology Federico Vercellone, Salvatore Tedesco, 2020-12-01 This book is a significant novelty in the scientific and editorial landscape Morphology is both an ancient and a new discipline that rests on Goethe's heritage and re-forms it in the present through the concepts of form and image The latter are to be understood as structural elements of a new cultural grammar able to make the late modern world intelligible In particular compared to the original Goethean project but also to C P Snow's idea of unifying the two cultures the fields of morphological culture that are the object of this glossary have profoundly changed The ever increasing importance of the image as a polysemic form has made the two concepts absolutely transitive so to speak This is concomitant with the emergence of a culture that revolves around the image attracting the verbal logos into its orbit Incidentally even the hermeneutic relationship between past and present relies more and more on the image causing deep changes in cultural environments Form and image are not just bridging concepts as in the field of ancient morphology but real transitive concepts that define the state of a culture From the Internet to smartphones television advertising etc we are witnessing as Horst Bredekamp observes an immense mass of images that fill our time and affect the most diverse areas of our culture The ancient connection between science and art recalled by Goethe emerges with unusual

evidence thanks to intersecting patterns and expressive forms that are sometimes shared by different forms of knowledge Creating a glossary and a culture of these intersections is the task of morphology which thus enters into the boundaries between aesthetics art design advertising and sciences from mathematics to computer science to physics and to biology in order to provide the founding elements of a grammar and a syntax of the image The latter in its formal quality both expressive and symbolic is a fundamental element in the unification of the various kinds of knowledge which in turn come to be configured in this regard also as styles of vision The glossary is subdivided into contiguous sections within a complex framework of cross references In addition to the two curators the book features the collaboration of a team of scholars from the individual disciplines appearing in the glossary

Communication Igor E. Klyukanov, 2022-06-10 Focusing on the scientific study of communication this book is a systematic examination To that end the natural social cultural and rational scientific perspectives on communication are presented and then brought together in one unifying framework of the semiotic square showing how all four views are interconnected The question of whether the study of communication can be considered a unique science is addressed It is argued that communication is never separate from any object of study and thus we always deal with its manifestations captured in the four scientific perspectives discussed in the book

Pediatric Neurology James F Bale Jr, Joshua L Bonkowsky, Francis M Filloux, Gary L Hedlund, Paul D Larsen, Denise C. Morita, 2011-12-15 Recognizing patterns of disease can be the first step to successful management of the child with a neurological problem this is emphasized by the authors throughout the book Their concise precise account reflects the remarkable recent advances in pediatric neurology and related disciplines while stressing the fundamentals of clinical examination and history taking in reaching an accurate diagnosis The book begins with a detailed discussion of neurological examination techniques and the basic formulation of differential diagnoses and management using neuroradiology electrophysiology cerebrospinal fluids genetic and metabolic testing The second section of the book follows a problem based approach just as diseases present in the real world It employs practical symptom and sign based strategies for virtually all conditions encountered by the practitioner The final section on neurological emergencies recognizes that such conditions present first to someone other than a pediatric neurologist This new color handbook is illustrated throughout by a wealth of top quality clinical photos and imaging and is of interest to pediatric neurologists general pediatricians primary care physicians and emergency physicians in training and practice

Language Development and Disorders in Spanish-speaking Children Alejandra Auza Benavides, Richard G. Schwartz, 2017-06-13 Prominent researchers from the US Mexico Chile Colombia and Spain contribute experimental reports on language development of children who are acquiring Spanish The chapters cover a wide range of dimensions in acquisition comprehension and production monolingualism and bilingualism typical development children who are at risk and children with language disorders phonology semantics and morphosyntax These studies will inform linguistic theory development in clinical linguistics as well as offer insights on how language works

in relation to cognitive functions that are associated with when children understand or use language The unique data from child language offer perspectives that cannot be drawn from adult language The first part is dedicated to the acquisition of Spanish as a first or second language by typically developing children the second part offers studies on children who are at risk of language delays and the third part focuses on children with specific language impairment disorders and syndromes

Language Acquisition in Diverse Linguistic, Social and Cognitive Circumstances Maria Garraffa, Maria Teresa Guasti, Theodoros Marinis, Gary Morgan, 2019-01-24 The language experience of children developing in linguistically diverse environments is subject to considerable variation both in terms of quantity and quality of language exposure It is an open question how to investigate language exposure patterns and more important which factors are relevant for successful language learning For example children acquiring a minority language including a signed language are exposed to less variety of input than children acquiring a more global language This is because they are living in a smaller linguistic community and with fewer occasions to use the language in everyday life Despite this reduced input most native signers are successful language learners In contrast native language competence is not always achieved in signing deaf children with hearing parents or those with cochlear implants learning a spoken language A similar outcome but with very different reasons has also been reported for hearing children with language impairment In these populations acquisition of morphosyntactic aspects is developing atypically ending with an uncomplete linguistic repertoire The circumstances of exposure during language development tend to differ in significant ways with respect to a large number of factors such as i length quality and quantity of input ii social status and attitudes toward the language iii cognitive abilities required for language learning and iv age of first exposure Having early exposure to a range of different speakers is important in the acquisition of any language and may affect language proficiency However negative societal attitudes or a cognitive based disadvantage may create an unfavourable learning environment that prevents language learning from surfacing typically This situation inevitably generates a different type of exposure for the child and consequently different language competence In this Research Topic we intend to encourage the debate on social linguistic and cognitive factors at play for designing an effective environment for language acquisition aiming at integrating linguistic variables coming from theoretical studies on language with environmental variables such as measures of language input or cognitive abilities on functions ancillary to language development

Development Maria-José Ezeizabarrena, Melita Kovacevic, 2024-09-13 Language is crucial in child development. Therefore, general questions such as what are the possible challenges in language acquisition or such as how well the my child is doing are commonly present for researchers, clinicians, teachers, and parents. Parent-child interaction offers a privileged setting to observe children's behavior in multiple communicative situations which often is only available to the parents/caregivers. For this reason, within the broad range of methods used to assess children's development, parental questionnaires are widely used, being a non-invasive and inexpensive instrument to obtain information which is otherwise difficult to obtain. Data obtained with the many questionnaires covering various aspects of child development and communicative competence are equally relevant for basic research and everyday clinical practice. Development and use of parental questionnaires as well as data interpretation frequently require an interdisciplinary and cross-sector approach, bringing together developmental psychologists and practitioners. This interdisciplinarity is assumed but rarely addressed directly. Language Disabilities in Cultural and Linguistic Diversity Deirdre Martin, 2009 Language Disabilities in Cultural and Linguistic Diversity offers a new approach to understanding the familiar dilemma of disentangling difficulties in communication for learners developing the language of schooling. The author takes a socio-cultural Vygotskian approach to reinterpret international research in language disabilities, namely specific language impairment, communication difficulties, dyslexia, and deafness. *Handbook of Japanese Psycholinguistics* Mineharu Nakayama, 2015-06-16 The studies of the Japanese language and psycholinguistics have advanced quite significantly in the last half century thanks to the progress in the study of cognition and brain mechanisms associated with language acquisition, use, and disorders, and in particular because of technological developments in experimental techniques employed in psycholinguistic studies. This volume contains 18 chapters that discuss our brain functions, specifically the process of Japanese language acquisition, how we acquire/learn the Japanese language as a first/second language, and the mechanism of Japanese language perception and production, how we comprehend/produce the Japanese language. In turn, we address the limitations of our current understanding of the language acquisition process and perception/production mechanism. Issues for future research on language acquisition and processing by users of the Japanese language are also presented. Chapter titles: 1. Learning to become a native listener of Japanese Reiko Mazuka 2. The nature of the count-mass distinction in Japanese Mutsumi Imai, Junko Kanero 3.
