**Plant-Parasitic Nematode Genus Meloidogyne Göldi, 1892 (Tylenchida) in Europe** Gerrit Karssen,2021-08-04 The genus Meloidogyne G ldi 1892 or root knot nematodes represent a relatively small but economically important group of obligate plant pathogens They are distributed worldwide and parasitize on almost every higher plant species While reproducing and feeding within roots they induce galls or root knots and disorder the physiology of the infected plant reducing crop yield and product quality More than eighty nominal species have been described worldwide while twenty species have been detected in Europe so far This book includes a historical review on the genus followed by a revision of the European species and completed with a study on one of the most characteristic morphological structures within the genus the perineal pattern      **The Cambridge Handbook of Learner Corpus Research** Sylviane Granger,Gaëtanelle

Gilquin,Fanny Meunier,2015-10-01 The origins of learner corpus research go back to the late 1980s when large electronic collections of written or spoken data started to be collected from foreign second language learners with a view to advancing our understanding of the mechanisms of second language acquisition and developing tailor made pedagogical tools Engaging with the interdisciplinary nature of this fast growing field The Cambridge Handbook of Learner Corpus Research explores the diverse and extensive applications of learner corpora with 27 chapters written by internationally renowned experts This comprehensive work is a vital resource for students teachers and researchers offering fresh perspectives and a unique overview of the field With representative studies in each chapter which provide an essential guide on how to conduct learner corpus research in a wide range of areas this work is a cutting edge account of learner corpus collection annotation methodology theory analysis and applications      *Catalog Handbook of Fine Chemicals* Aldrich Chemical Company,2003

**Sigma-Aldrich Labware** Sigma-Aldrich Corporation,2009      **Handbook of Alternative Theories of Economic Development** Erik S. Reinert,Jayati Ghosh,Rainer Kattel,2016-09-28 The Handbook of Alternative Theories of Economic Development explores the theories and approaches which over a prolonged period of time have existed as viable alternatives

to today's mainstream and neo-classical tenets. With a total of 40 specially commissioned chapters written by the foremost authorities in their respective fields, this volume represents a landmark in the field of economic development. It elucidates the richness of the alternative and sometimes misunderstood ideas which in different historical contexts have proved to be vital to the improvement of the human condition. The subject matter is approached from several complementary perspectives. From a historical angle, the Handbook charts the mercantilist and cameralist theories that emerged from the Renaissance and developed further during the Enlightenment. From a geographical angle, it includes chapters on African, Chinese, Indian, and Muslim approaches to economic development. Different schools are also explored and discussed, including nineteenth-century US development theory, Marxist, Schumpeterian, Latin American structuralism, regulation theory, and world systems theories of development. In addition, the Handbook has chapters on important events and institutions, including The League of Nations, The Havana Charter, and UNCTAD, as well as on particularly influential development economists. Contemporary topics such as the role of finance, feminism, the agrarian issue, and ecology and the environment are also covered in depth. This comprehensive Handbook offers an unrivalled review and analysis of alternative and heterodox theories of economic development. It should be read by all serious scholars, teachers, and students of development studies, and indeed anyone interested in alternatives to development orthodoxy.

#### **Learning, Unlearning and Re-Learning Curves** Alan

Jones, 2018-09-13. Learning, Unlearning, and Re-learning Curves. Volume IV of the Working Guides to Estimating Forecasting series focuses in on Learning Curves and the various tried and tested models of Wright, Crawford, DeJong, Towill, Bevis, and others. It explores the differences and similarities between the various models and examines the key properties that Estimators and Forecasters can exploit. A discussion about Learning Curve Cost Drivers leads to the consideration of a little used but very powerful technique of Learning Curve modelling called Segmentation, which looks at an organisation's complex learning curve as the product of multiple shallower learning curves. Perhaps the biggest benefit is that it simplifies the calculations in Microsoft Excel where there is a change in the rate of learning observed or expected. The same technique can be used to model and calibrate discontinuities in the learning process that result in setbacks and uplifts in time or cost. This technique is compared with other better known techniques such as Anderlohr's Equivalent Unit Learning, which is another relative new technique that can be used alongside traditional completed unit learning to give an early warning of changes in the rates of learning. Finally, a Learning Curve can be exploited to estimate the penalty of collaborative working across multiple partners. Supported by a wealth of figures and tables, this is a valuable resource for estimators, engineers, accountants, project risk specialists, as well as students of cost engineering.

#### **Agent-Based Computer Simulation of Dichotomous Economic Growth** Roger A. McCain, 2012-12-06

Agent Based Computer Simulation of Dichotomous Economic Growth reports a project in agent based computer stimulation of processes of economic growth in a population of boundedly rational learning agents. The study is an exercise in comparative simulation. That is, the same family of growth models will be simulated under different

assumptions about the nature of the learning process and details of the production and growth processes The purpose of this procedure is to establish a relationship between the assumptions and the simulation results The study brings together a number of theoretical and technical developments only some of which may be familiar to any particular reader In this first chapter some issues in economic growth are reviewed and the objectives of the study are outlined In the second chapter the simulation techniques are introduced and illustrated with baseline simulations of boundedly rational learning processes that do not involve the complications of dealing with long run economic growth The third chapter sketches the consensus modern theory of economic growth which is the starting point for further study In the fourth chapter a family of steady growth models are simulated bringing the simulation growth and learning aspects of the study together In subsequent chapters variants on the growth model are explored in a similar way The ninth chapter introduces trade with a spacial trading model that is combined with the growth model in the tenth chapter The book returns again and again to the key question to what extent can the simulations explain the puzzles of economic growth and particularly the key puzzle of dichotomization by constructing growth and learning processes that produce the puzzling results And just what assumptions of the simulations are most predictable associated with the puzzling results International Record of Medicine and General Practice Clinics
