We are living in the age of high information and communication technology, and have long-standing problem of improving human health in healthcare systems. *The History of Telemedicine* provides a comprehensive and in-depth historical view of telemedicine from ancient Greece to the present time. Telemedicine in Low-Resource Settings, Volume 2 Richard Wootton,Laurent Bonnardot,Sophie Delaigue,2020-04-24 Telemedicine networks to support healthcare workers in resource limited settings often for humanitarian purposes have evolved in a largely autonomous way Communication between the networks has been informal and relatively limited in scope This situation could be improved by developing a comprehensive approach to the collection and dissemination of information While many telemedicine networks remain experimental some have matured to become routine services which assist health care delivery in challenging environments For example there are a few networks which have been in operation for over a decade and provide store and forward telemedicine services to doctors in lowand middle income countries These networks deliver clinically useful services and improved healthcare access However like much of telemedicine the formal evidence for their cost effectiveness remains weak Topics of current research interest therefore include the cost effectiveness of telemedicine in resource limited settings Other topics of interest concern outcomes data and methods for gathering it such as patient quality of life following a telemedicine episode the knowledge gain of healthcare staff involved in telemedicine and staff recruitment and retention in rural areas Finally there is little published information about the performance of these telemedicine networks and methods for measuring it about how best to manage them and about how to share resources between them Following the previous volume this Research Topic will document current evidence supporting the use of telemedicine in resource limited settings Digitalization and the Transformation of the Healthcare Sector
