Garden Plants Taxonomy Bijan Dehgan, 2023-01-01 Horticulture has remained far behind in understanding of botanical principles Recent phylogenetic DNA based reorganization of higher plants has revolutionized taxonomic treatments of all biological entities even when morphology does not completely agree with their organization This book is an example of applying principals of botanical phylogenetic taxonomy to assemble genera species and cultivars of 200 vascular plant families of ferns gymnosperms and angiosperms that are cultivated for enhancement of human living space homes gardens and parks The emphases are on cultivated species but examples of some plants are often shown in the wild and in landscapes In providing descriptions it is assumed that students and other interested individuals have no background in general botany plant characteristics or nomenclature Fundamental features of all plant groups discussed are fully illustrated by original watercolor drawings or photographs Discussion of the families is grounded on recent botanical phylogenetic treatments which is based on common ancestry monophyly Of course phylogenetic taxonomy is not a new concept and was originally based on morphological characteristics it is the DNA based phylogeny that has revolutionized modern biological classifications In practical terms this book represents the horticultural treatment that corresponds to phylogenetic based

botanical taxonomy to which is added cultigens and cultivated genera and species Hence the harmony between horticultural and botanical taxonomy This book covers phylogenetic based taxonomy of Ferns Gymnosperms and Angiosperms Monocots A companion volume covers Angiosperms Eudicots *Florida Getting Started Garden Guide* Tom MacCubbin, Georgia Tasker, 2013-08-11 Full color plant photos and complete growing instructions for the native plants of Florida *Color for the Landscape* Mildred E. Public Garden Management: a Global Perspective Bijan Dehgan,2014-04-16 Public Gardens Management A Global Perspective provides essential information about public gardens and what is involved in designing managing and maintaining one Although suitable as a textbook its audience will include anyone with direct or peripheral responsibility for administration or supervision of a complex organization that requires scientific knowledge as well as public relations and business acumen It may also prove useful for homeowners for there is no fundamental difference between growing plants in a public garden or a home garden a fact reflected in the extensive reference citations The topic is multidisciplinary and as old as the beginning of human civilization when the concept of mental and physical restoration was realized by early man while he she was in a natural but well ordered garden environment Thus began the art of garden making Many volumes have been written on every applicable subject discussed in this and similar publications Indeed the voluminous literature on history

design horticulture and numerous related subjects is nothing short of overwhelming Accordingly anyone involved in management of public gardens whether as a director or area supervisor and irrespective of the type and size of such facility would have to have familiarity with various aspects of garden organization and administration However despite the enormous number and diversity of such publications there are very few books that deal with the multiplicity of the topics in such a manner as to be practical in approach and cover most relevant and unified issues in a single book These volumes provide the essential background information on plants animals management maintenance fundraising and finances as well as history art design education and conservation They also cover a host of interrelated subjects and responsible organization of such activities as creating a childrens garden horticultural therapy conservatories zoological gardens and parks hence administration of multidimensional public gardens Nearly 500 full color plates representing illustrations from gardens in more than 30 countries are provided to assist and guide students and other interested individuals with history and the fundamental issues of public garden management The 15 chapters begin with the need for public gardens types of public gardens historical backgrounds as well as design diversity Numerous quotations are included from many garden lovers landscape architects philosophers and others The authors primary aim in writing this book was based on the confidence that a relevant reference between the encyclopedic nature of some and the specific subject matter of others could be used to provide fundamental information for management of public as well as private gardens The boundary between botanical and zoological gardens and parks is no longer as distinct as it once was In part it is because a garden is not a garden without plants and in part it has become apparent that for all practical intents and purposes all animals need plants for their survival Visitors of zoological gardens expect to see more than just animals zoos are landscaped grounds Moreover most communities find it financially difficult to simultaneously operate a botanical garden or an arboretum as well as a zoological garden and city parks A number of public gardens are currently referred to as botanical and zoological garden Population density and the publics desires and expectations as well as financial requirements are among the reasons for some major city parks such as Golden Gate in San Francisco Central Park in New York City and Lincoln Park in Chicago which integrate botanical or zoological divisions as well as museums and recreational facilities While this book attempts to provide basic principles involved in public garden management it does not claim to be a substitute for broader familiarity

Plant Diversity in Biocultural Landscapes Siva Ramamoorthy, Inocencio E Buot Jr., C Rajasekaran, 2023-06-09 The edited book highlights comprehensive studies on plant diversity dynamics ecosystem processes and best conservation practices from the interdisciplinary perspectives such as the botanists ecologists conservation biologists geneticists cell biologists molecular biotechnologists and social scientists The main focus of the book is to address biodiversity loss and ecosystem collapse amidst the escalating climate change problems aggravated by anthropogenic activities in biocultural landscapes The book describes the biocultural landscape of today ecology of plant diversity botany of keystone and other rare species of economic

and pharmaceutical significance ecosystem processes conservation and emerging frameworks to sustain biocultural landscapes in the Anthropocene Biocultural landscapes are tracks of land in many parts of the world shaped by unique human nature interactions Many of these landscapes are populated with indigenous peoples with a unique way of life including their interaction with plants and the environment The relationship between humans and nature in biocultural landscapes used to be harmonious However as the human population surges much pressure has been experienced by the landscape hence the loss of biodiversity and degradation of ecosystem services that cascade to agricultural systems The book is of interest to teachers professors policymakers researchers and advocates in the fields of botany ecology taxonomy biodiversity conservation environmental science molecular biology and genomics molecular ecology agriculture and Agri tourism forestry social science and climate change professionals Also the book serves as a good reference and additional reading material for undergraduate and graduate students
