Respiratory Diseases in the Elderly V. Bellia,R. Antonelli Incalzi,2009-03-01 The world population is rapidly ageing As a consequence the portion of the elderly burdened with polipathology and disability will grow while economic resources to support it will shrink due to the contraction of the working force This will require a long term preventive political strategy but there are also selected healthcare interventions that can be easily implemented to decrease the negative impact of this demographic trend on the well being of our societies Examples are strategies that slow functional decline and preserve personal capabilities in geriatric populations Instrumental *Essentials of Respiratory Care - E-Book* Robert M. Kacmarek,Craig W. Mack,2005-01-18 Completely updated to reflect the significant advancements in the field of respiratory care Reflects the required core content of the most recent National Board for Respiratory Care NBRC examination matrix ensuring the most up to date competency requirements for certification Features new chapters on ventilatory management for obstructive pulmonary disease adult respiratory distress syndrome NIPPV tracheal gas insufflation prone positioning and liquid ventilation A redesigned format provides easier navigation through the text **Lung Inflammation in Health and Disease, Volume II** Yong-Xiao Wang,2021-05-21 Lung diseases are leading causes of death and disability globally with about 65 million people suffering from COPD and 334 million from asthma Each year tens of millions of people develop and

can die from lung infections such as pneumonia and TB Systemic inflammation may induce and exacerbate local inflammatory diseases in the lungs and local inflammation can in turn cause systemic inflammation There is increasing evidence of the coexistence of systemic and local inflammation in patients suffering from asthma COPD and other lung diseases and the co morbidity of two or more local inflammatory diseases often occurs For example rheumatoid arthritis frequently occurs together with and promotes the development of pulmonary hypertension This co morbidity significantly impacts quality of life and can result in death for some patients Current treatment options for lung disease are neither always effective nor condition specific there is a desperate need for novel therapeutics in the field Additionally the molecular and physiological significance of most major lung diseases is not well understood which further impedes development of new treatments especially in the case of coexistent lung diseases with other inflammatory diseases Great progress has been made in recent years in many areas of the field particularly in understanding the molecular geneses regulatory mechanisms signalling pathways and cellular processes within lung disease as well as basic and clinical technology drug discovery diagnoses treatment options and predictive prognoses This is the first text to aggregate these developments In two comprehensive volumes experts from all over the world present state of the art advances in the study of lung inflammation in health and disease Contributing authors cover well known as well as emerging topics in basic translational and clinical research with the aim of providing researchers clinicians professionals and students with new perspectives and concepts The editors hope these books will also help to direct future research in lung disease and other inflammatory diseases and result in the development of novel therapeutics
