In every area of human endeavor technology has opened the door for new advancements to occur Much of the progress in medicine over the last few years is due in large part to new technological tools made available to clinicians and researchers Laser is an expanding technological discipline in medicine that will ultimately contribute to a broad and rapid expansion of both diagnostic and treatment procedures Laser is to light what music is to noise Those physicians who wish to be most successful in the application of this technology to the benefit of their patient will learn of the subtle interactions of light with tissue No technology is good or bad in itself It is only in the choices we make in when and how to apply that technology that it gains its moral value The use of lasers in medicine has some very definite advantages in the surgical and medical treatment of a variety of disorders At the same time we must all be careful to not perpetrate the myth of lasers in medicine Vastly overstated claims of the value of laser surgery have been held out to the general public resulting in health care being sought on the basis of laser availability **Applied Laser Medicine** H. Breuer, N. Krasner, T. Okunata, D. Sliney, 2012-12-06 The history of laser applications in medicine starts al In the early 1990s a concerted action program most with the invention of the laser itself sponsored by the European Commission was carried out in Europe for the dissemination of the safe use of It was only a few months after Maiman s invention lasers in medicine and in 1996 a similar program was when this new high

Laser Applications in Medicine and Biology Myron Wolbarsht, 2013-06-29 In the intervening years since the publication of Volume I the develop ment of new uses for the various types of lasers has proceeded at a rate more rapid than even the most fanciful dreamers envisioned Of course the main effort has been on the laser itself new wavelengths shorter and longer time domains for pulses increases in power and most

important greater reliability In its first stage the laser was described as a solution in search of a problem The production of holograms was one problem whose solution seemed to involve large number of lasers However that proposal had its own difficulties for the hologram itself was described as a solution searching for a problem But all of that now is a chapter from ancient history On the current scene the laser is used in industrial pro duction lines as a classroom item at all levels of education and in com mercial usage such that the public is generally exposed to the laser devices themselves Trial runs have been made e g of laser based supermarket checkout devices and as commercial exploitation of this item begins cer tainly many more similar adaptations will follow However the shift in emphasis from research usage of lasers to de velopment and production has been relative rather than absolute The use of the laser in research has not lessened rather it has grown at as fast a pace Yet a similar trend is seen there also
