vocabulary seems to consist largely of sesquisyllabic or iambic words although there are an enormous number of unassimilated borrowings from Indic languages which seem to play the same role in Cambodian that Latinate borrowings do in English Morphologically Cambodian has a fairly elaborate system of derivational affixes and it is possible that the genesis of many of the most common of these affixes is related to and undoes the constant reduction of unstressed initial syllables in sesquisyllabic words Again like many of the languages of Southeast Asia Cambodian exhibits in its lexicon a penchant for symmetrical decorative compounding a phenomenon which is so marginally attested in Western languages that the phenomenon has received little attention in the typological literature
