

Magnetic Particle Inspection (Mpi) Devices

- Magnetic Particle Inspection (MPI) is a vital nondestructive testing method for assessing the structural integrity of industrial materials without causing damage
- The technique is especially useful for detecting surface and near-surface flaws in ferromagnetic materials
- MPI works by applying a magnetic field to the material and using tiny magnetic particles to identify disturbances in the field, revealing flaws
- Despite its many advantages, MPI is limited to ferromagnetic materials and only detects surface and near-surface defects

Advanced Magnetic Materials Yi Liu, D.J. Sellmyer, Daisuke Shindo, 2008-11-23 In December 2002 the world's first commercial
magnetic levitation super train went into operation in Shanghai The train is held just above the rails by magnetic levitation
maglev and can travel at a speed of 400 km/hr completing the 30km journey from the city to the airport in minutes Now
consumers are enjoying 50 GB hard drives compared to 0.5 GB hard drives ten years ago Achievements in magnetic
materials research have made dreams of a few decades ago reality The objective of the four volume reference Handbook of
Advanced Magnetic Materials is to provide a comprehensive review of recent progress in magnetic materials research Each
chapter will have an introduction to give a clear definition of basic and important concepts of the topic The details of the
topic are then elucidated theoretically and experimentally New ideas for further advancement are then discussed Sufficient
references are also included for those who wish to read the original work In the last decade one of the most significant thrust
areas of materials research has been nanostructured magnetic materials There are several critical sizes that control the
behavior of a magnetic material and size effects become especially critical when dimensions approach a few nanometers
where quantum phenomena appear The first volume of the book Nanostructured Advanced Magnetic Materials has therefore
been devoted to the recent development of nanostructured magnetic materials emphasizing size effects Our understanding of
magnetism has advanced with the establishment of the theory of atomic magnetic moments and itinerant magnetism
Simulation is a powerful tool for exploration and explanation of properties of various magnetic materials Simulation also
provides insight for further development of new materials Naturally before any simulation can be started a model must be
constructed This requires that the material be well characterized Therefore the second volume Characterization and
Simulation provides a comprehensive review of both experimental methods and simulation techniques for the
characterization of magnetic materials After an introduction each section gives a detailed description of the method and the
following sections provide examples and results of the method Finally further development of the method will be discussed
The success of each type of magnetic material depends on its properties and cost which are directly related to its fabrication
process Processing of a material can be critical for development of artificial materials such as multilayer films clusters etc
Moreover cost effective processing usually determines whether a material can be commercialized In recent years processing
of materials has continuously evolved from improvement of traditional methods to more sophisticated and novel methods The
objective of the third volume Processing of Advanced Magnetic Materials is to provide a comprehensive review of recent
developments in processing of advanced magnetic materials Each chapter will have an introduction and a section to provide
a detailed description of the processing method The following sections give detailed descriptions of the processing properties

and applications of the relevant materials Finally the potential and limitation of the processing method will be discussed The properties of a magnetic material can be characterized by intrinsic properties such as anisotropy saturation magnetization and extrinsic properties such as coercivity The properties of a magnetic material can be affected by its chemical composition and processing route With the continuous search for new materials and invention of new processing routes magnetic properties of materials cover a wide spectrum of soft magnetic materials hard magnetic materials recording materials sensor materials and others The objective of the fourth volume Properties and Applications of Advanced Magnetic Materials is to provide a comprehensive review of recent development of various magnetic materials and their applications Each chapter will have an introduction of the materials and the principles of their applications The following sections give a detailed description of the processing properties and applications Finally the potential and limitation of the materials will be discussed
