*The Arabian Seas: Biodiversity, Environmental Challenges and Conservation Measures* Laith A. Jawad, 2021-03-30 The Arabian Seas Marine Region encompasses marine areas from Djibouti to Pakistan including the northern part of Somalia the Red Sea the Arabian Persian Gulf and parts of the Arabian Sea Human pressures on the coastal and marine environments are evident throughout the region and have resulted in harmful environmental effects Oil and domestic urban and industrial pollutants in several areas of this part of the world have caused local habitat degradation eutrophication and algal blooms Further coastal

landfill dredging and sedimentation as well as nutrient and sediment runoff from phosphate mining agriculture and grazing and reduction in freshwater seepage due to groundwater extraction are all contributing to the degradation of coastal environments This book discusses aspects not covered in other books on the region which largely focus on marine biodiversity and examines several environmental challenges that are often ignored but which have a significant impact on the environment Evaluating the status quo it also recommends conservation measures and examines the abiotic factors that play a major main role in the environmental changes Lastly the book addresses the biodiversity of the area providing a general context for the conservation and management measures discussed
