Composites John Summerscales, 1998-07-10 Over the last 50 years great progress has been made in developing artificial fibre reinforced composite materials generally using filaments with microscopic diameters A wide range of reinforcement forms from random arrays to fully aligned can be used for commercial applications with the microstructure being a critical factor in realising the required properties in a material This is the first up to date review of how to apply advanced microstructural characterisation techniques to fibre reinforced composites Each chapter is designed to offer both a stand alone introduction

to its topic and detailed referencing for follow up research With contributions from experts from around the world the book will be an essential reference for materials scientists and research workers in industry and academia alike Comprehensive and up to date review of the microstructural features of composites Covers a wide range of microstructure characterisation techniques Methods in Biomedical Magnetic Resonance Imaging and Spectroscopy Ian Robert Young, 2000 These volumes are an abstraction from the Encyclopedia of Nuclear Magnetic Resonance of articles concerned with magnetic resonance imaging and spectroscopy The volumes cover imaging in all its forms and spectroscopy in as far as it relates to in vivo studies and clinical applications involving in vitro investigations of tissue The various articles which comprise these two volumes are organised into topic based sections Some of the articles appear as they were originally presented in the Encyclopedia where there is little new information and some have been more or less substantially revised in the light of what has happened since the articles were first written A number of new articles have been added where topics have either developed from fragmentary discussions in the early 1990s or have been created ab initio since the publication of the Encyclopedia These extensive volumes are unique in their coverage with a balance between imaging physics spectroscopy and clinical studies In many ways they reflect the scope covered by the major international in vivo NMR Societies with a conscious effort to allow the reader to understand all the elements that make up modern clinical magnetic resonance Equally the topic is so huge and still evolving so fast in detail rather than concept that they can act as no more than an introduction though at quite a demanding level The reader will appreciate the extent nature and dynamics of human and animal magnetic resonance and will have the route map to allow them to find any further information they may need
