Christie, 2015-11-06 The Italian Army developed a sound and unique combined arms doctrine for mechanized warfare in 1938 This new doctrine was called the War of Rapid Decision It involved the use of mechanized warfare in the Italian version of the blitzkrieg This doctrine evolved from the lessons learned in the Italian Ethiopian War of 1935 to 1936 and the Spanish Civil War of 1936 1939 With Italy's entry into World War II military operations ensued along the Libyan Egyptian border between the Italian 10th Army and a much smaller British Western Desert Force The Italian Army in Libya outnumbered the British Army in Egypt by a ratio of four to one The setting seemed to be ideal for the employment of the War of Rapid Decisions Moreover Marshal Rodolfo Graziani who was the commander of the Italian 10th Army in North Africa during its first campaign in the western desert had pioneered this new form of mechanized warfare during the Ethiopian War Surprisingly the Italian forces in Libya did not employ their new doctrine reverting instead to more conventional techniques of mass It was Graziani's failure to utilize the doctrine which he had helped to develop that led to Italy's embarrassing defeat in 1941 **Moody's International Manual**, 1994 **Electromagnetic Compatibility in Railways** Ade Ogunsola, Andrea Mariscotti, 2012-08-14 A railway is a complex distributed engineering system the construction of a new railway or the modernisation of an existing one requires a deep understanding of the constitutive components and their interaction inside the system itself and towards the outside world The former covers the various subsystems featuring a complex mix of high power sources sensitive safety critical systems intentional transmitters etc and their interaction including the specific functions and their relevance to safety The latter represents all the additional possible external victims and sources of electromagnetic interaction EMC thus starts from a comprehension of the emissions and immunity characteristics and the interactions between sources and victims with a strong relationship to electromagnetics and to system modeling On the other hand the said functions are achieved and preserved and their relevance for safety is adequately handled if the related requirements are well posed and managed throughout the process from the beginning The link is represented by standards and their correct application as a support to analysis testing and demonstration Jane's World Railways Ken Harris, Jackie Clarke, 2005-11 This directory gives the reader data on
